Psychodynamics of Fungal Infections

Fungal Infections

- Fungi usually make their homes in moist areas of the body where skin surfaces meet: between the toes, in the genital area, and under the breasts. Common fungal skin infections are caused by yeasts (such as Candida or Malassezia furfur) or dermatophytes, such as *Epidermophyton*, *Microsporum*, and *Trichophyton*.

Fungal Infections

Many such fungi live only in the topmost layer of the epidermis (stratum corneum) and do not penetrate deeper. Obese people are more likely to get these infections because they have excessive skinfolds, especially if the skin within a skinfold becomes irritated and broken down ([intertrigo](#)). People with [diabetes](#) tend to be more susceptible to fungal infections as well.

Tinea Corporis

- Ringworm of the body (tinea corporis) is a rash caused by a fungal infection. It's usually an itchy, circular rash with clearer skin in the middle. Ringworm gets its name because of its appearance. No worm is involved.
- Ringworm of the body is related to athlete's foot (tinea pedis), jock itch (tinea cruris) and ringworm of the scalp (tinea capitis). Ringworm often spreads by direct skin-to-skin contact with an infected person or animal.

Tinea Versicolor

- Tinea versicolor is a common fungal infection of the skin. The fungus interferes with the normal pigmentation of the skin, resulting in small, discolored patches. These patches may be lighter or darker in color than the surrounding skin and most commonly affect the trunk and shoulders.

© MAYO FOUNDATION FOR MEDICAL EDUCATION AND RESEARCH. ALL RIGHTS RESERVED

Tinea Versicolor

- Tinea versicolor occurs most frequently in teens and young adults. Sun exposure may make tinea versicolor more apparent. Tinea versicolor, which is also called pityriasis versicolor, is not painful or contagious. But it can lead to emotional distress or self-consciousness.
- Antifungal creams, lotions or shampoos can help treat tinea versicolor. But even after successful treatment, skin color may remain uneven for several weeks or months. Tinea versicolor often recurs, especially in warm, humid weather.

Athlete's foot (tinea pedis)

- Athlete's foot is a fungal infection that affects the skin on your feet, often between your toes. Typical symptoms of athlete's foot include:
- Itching, or a burning, stinging sensation between your toes or on the soles of your feet
- skin that appears red, scaly, dry, or flaky
- Cracked or blistered skin
- In some cases, the infection can also spread to other areas of your body. Examples include your nails, groin, or hands (tinea manuum).

Jock itch (tinea cruris)

- Jock itch is a fungal skin infection that happens in the area of your groin and thighs. It's most common in men and adolescent boys.
- The main symptom is an itchy red rash that typically starts in the groin area or around the upper inner thighs. The rash may get worse after exercise or other physical activity and can spread to the buttocks and abdomen.
- The affected skin may also appear scaly, flaky, or cracked. The outer border of the rash can be slightly raised and darker.

Ringworm of the scalp (tinea capitis)

- This fungal infection affects the skin of the scalp and the associated hair shafts. It's most common in young children and needs to be treated with prescription oral medication as well as antifungal shampoo. The symptoms can include:
 - localized bald patches that may appear scaly or red
 - associated scaling and itching
 - associated tenderness or pain in the patches

Onychomycosis (tinea unguium)

- Onychomycosis is a fungal infection of your nails. It can affect the fingernails or the toenails, although infections of the toenails are more common.
- You may have onychomycosis if you have nails that are:
 - Discolored, typically yellow, brown, or white
 - Brittle or break easily
 - thickened

Pityriasis Alba

- Pityriasis alba is a common, benign skin disorder consisting of characteristic round or oval hypopigmented lesions with fine scales and occurring predominantly in children and adolescents. Most patients have a history of atopy, and pityriasis alba may be a minor manifestation of atopic dermatitis.

Risk factors

- There are several factors that can put you at an increased risk of getting a fungal skin infection. These include:
- living in a warm or wet environment
- **Sweating** heavily
- not keeping your skin clean and dry
- sharing items like clothing, shoes, towels, or bedding
- wearing tight clothing or footwear that doesn't breathe well
- taking part in activities that involve frequent skin-to-skin contact
- coming into contact with **animals** that may be infected
- having a weakened immune system due to **immunosuppressant drugs**, **cancer treatment**, or conditions such as **HIV**

Psychodynamics

- Fungus: Stagnating beliefs. Refusing to release the past. Letting the past rule today.
- Ringworm: Allowing others to get under your skin. Not feeling good enough or clean enough. Stagnation, stasis
- Athlete's Foot: Frustration at not being accepted. Inability to move forward with ease.
- Injustice
- Can't speak
- Suppressed anger
- Sexual desire suppressed

Psychodynamics- Louis Hay

Probable Cause: Feeling very scattered. Lots of frustration and anger.
Demanding and untrusting in relationships. Great takers.

New Thought Pattern: I give myself permission to be all that I can be, and I deserve the very best in life. I love and appreciate myself and others.

Problem: Thrush (Louise Hay Yeast Infection)

Probable Cause: Denying your own needs. Not supporting yourself.

New Thought Pattern: I now choose to support myself in loving, joyous ways.

Psychodynamics- Louis Hay

Emotionally, Candida is associated with feeling victimized and includes: helplessness, hopelessness, fear of responsibility, too much responsibility, overwhelming burden, suppressed rage, lack of confidence and betrayal. Often there are underlying and unconscious beliefs, such as: I am not good enough; no matter how hard I try, I can't get what I want; I've tried everything and nothing works; I can't heal completely; I am not lovable, etc. Candida is an emotional condition causing people to act out and feel frustrated from unresolved pain from the past. You can heal and grow stronger with your personal power through Core Emotional Healing. Your emotional empowerment begins with your commitment to healing yourself and taking care of your emotional needs, instead of numbing how you feel and using sugar to feel better, which feeds Candida and your repression.

Psychodynamics- Louis Hay

The first step towards true healing is knowing you were once a victim to emotional abandonment, neglect and/or abuse and your wounded inner child needs you. Candida emotional causes and the emotional root cause

Psychodynamics- Louis Hay

child needs you. Candida emotional causes and the emotional root cause of Candida is victimhood, which means you are still stuck in your victimhood and childhood pain. Candida is masking your repressed emotions such as sadness, fear, guilt, shame and anger. Now it is time to validate and stand up for your feelings by fully feeling them to release them!

Digestive problems, yeast infections, emotional eating, addictions, codependency, perfectionism, obsession with outside approval, and chronic victim mentality were all manifestations of emotional neglect and unresolved trauma of various types.

Psychodynamics

- Feeling used or abused
- Husband like a parasite on a working woman who is the host
- Dysfunctional relations
- Feels low in energy
- Work place-some people do all hard work but others get credit
- Mother of the house- feels tired, wasted- sepiia state, ignatia- no one is asking me even a glass of water
- Feels wasted, abused
- Gives up at a particular stage

Psychodynamics

- Feel too dependent on other person
- Worthless, poor sense of self worth, low self esteem
- Husband does not respect them
- Feel unrecognised
- Husband away, died, abandoned the family, handicapped husband, husband alcoholic, irresponsible
- Ailments from abuse
- Has to take up responsibility
- Host parasite

Psychodynamics

- According to the metaphysical therapist I. Rose, the presence of a fungus in a person indicates that a strong trauma is present in his soul, with which he cannot part yet. A person feels that someone must answer for the pain and injustice that he has experienced.
- A person not only constantly lives with an internal feeling of indignation, but it has even become an integral part of it. A person cannot imagine himself without a sense of injustice, betrayal or disappointment.

Psychodynamics

- The fungus carrier often returns thoughts to the past, unconsciously again and again “picking” old wounds. Perhaps the person is afraid to part with the usual feelings and patterns that helped him cope with difficulties in the past. His indignation served as a protective shield that prevented an even more violent breakdown.
- Feeling and projecting indignation for a person suffering from a fungal disease is a way to define their boundaries and compensate for the deep fear that he experiences inside.
- In many cases, the psychosomatics of the fungus is due to the fact that a person carries suppressed indignation in relation to a significant person who left or rejected him as a punishment. This resentment comes from childhood, but it can re-emerge to the surface in partnerships or marriage.

Psychodynamics

- Rose writes:

“In the past, when you opened with confidence to accept love, you were instead attacked (physically or verbally) or abandoned. It made you feel indignant with anger and frustration.”
- The fungus on the toes is often associated with trauma related to the mother. Another reason for this psychosomatics is the transmission of such an injury by gender: some of the ancestors in the family, or even several generations, had traumatic relationships with their mothers.

Psychodynamics

- Dr. Torsunov believes that one or more of the character traits mentioned in the list below draws a fungus of the genus *Candida* into the body. Without changing the character, it is impossible to get rid of the fungus. Even if the fungus is treated without having worked on the character, later it will still return, or another kind of fungus will be attracted.
- **The fungus attracts:**
 - Sloppy
 - Ignorance
 - Fatigue
 - Promiscuity
 - Indifference
 - Cruelty
 - Pessimism, hopelessness, depression (despondency)

Psychodynamics

- Louise Hey notes that the fear of decision is all the fault, fear of the future due to unsuccessful past attempts. Fungal infection is closely related to feelings of resentment towards specific individuals. Often such a person is the mother, as many psychological experiences originate from childhood.
- A person begins to perceive himself and others incorrectly due to:
 - Inadequate or excessive satisfaction of any mental or emotional need;
 - The lack of individuality in children, the invasion of parents in the personal space of the child, the presence of authoritarianism in the family.
 - If a person is genetically predisposed to fungal infections, this suggests that everyone in the family had a difficult relationship with their mother.

HHS

CASES

YASAL HAKLARI HHS'YE AITTİR

Fungal - Case 1

- 45 years female pt, came with complaints of severe fungal infection all over body, took allopathic treatment for 15 days with no relief. Pt referred by my another pt who got better with homeopathic medicines for fungal infection (Looks fair, obese at 86kg, well dressed and with make up)
- Pt cooks in ladies hostel (for cooking she is in front of gas for 4- 5 hrs) but at home she does not make food, her daughters make food
- Husband: job
- Daughter elder: engineer – job
- Daughter younger: college
- MIL died 4 months back, she was bedridden for a long time

Fungal - Case 1

- Dr: What happened, how can I help you?
- Pt : Dr, I have severe skin infection all over body, severe itching as well as burning. When I start to scratch, it becomes worse and spreads more than before.
- Dr. Have you taken any medicines for it?
- Pt: Some allopathic medicine taken (she showed me all ointments), but it gives me temporary relief and then it comes again.
- Dr: Why do you want homeopathic medicine now?
- Pt: I took allopathic medicine but had no relief, and my friend had same complaints and she better with your homeopathic medicines. So I want his medicine now.
- Dr: Please tell me about your suffering, how can it affect you and your daily routine?
- Pt: This itching and burning affects me more now than when it started, I became very restless and it never comes down with anything. I need to work 4- 5 hrs in front of gas stove, that heat increases my complaints and other members are also there so I feel bad when I scratch in front of them. I need to wash hands repeatedly because of that. Please give me medicine firstly to relieve my itching, then for other symptoms.

Fungal - Case 1

- Actually she took an appointment, before coming she called me but I said to her pls come next day because that day I had many patients, but she said I will come late, give me medicine today only, I have more pain.
- Observation: during telling symptoms her tone is like lamenting but goes back to normal tone afterwards.
- She is talkative, easily mixes with others.
- But the clue was she does not make food at home, her daughters do all household works
- Nowadays the girls are making food at home as well as taking care of the younger one, taking care of granny also.
- But she is not dominating

Fungal - Case 1

- The feel is that she is the man of the house, I am going to earn outside and so girls will take care of the house. Little air in her attitude. Carried, desire to be carried fast.
- Please give me medicine firstly that will relieve my itching THEN other symptoms
- INDIFFERENCE TO RECOVERY
- CARRIED DESIRE TO BE CARRIED
- Patient also felt persecuted
- She is RESTLESSNESS HEAT DURING

Fungal - Case 1

- Pt is presentable in front of doc as well as outside. In hostel she is doing her work, but not at home.
- She has been taking allopathic treatment for 10 days, her friend got cured with homoeopathic medicine so now she also wants to take it. IMPRESSIONABLE.
- She took an appointment and wanted to come the same day, wanted quick relief. CARRIED desire to carried fast.
- Doc, first stop itching. INDIFFERENT to recovery.
- When there is itching in front of others I don't like it - Embarrassment ailments after. Presentation concerned of.
- At same time she is not doing work at home, it is carried out by her mother in-law. Dictatorial lady.
- She became Restless during itching. Restlessness heat during.

Fungal - Case 1

- Patient wants to get rid of the itching as soon as possible. Due to the itching, she has to scratch it constantly with other people around. She has become restless because of that. That's why she didn't even wait till the next day. And she has even told the doctor to take care of the itching first and foremost, other symptoms can wait. She was quite presentable in the clinic.
 - Carried, desire to be fast
 - Indifference, recovery to
 - Restlessness

Fungal - Case 1

- What is the Concern of patient?
 - Wants relief from itching
 - Scratching in front of others, cannot bear that
 - Every time I have to wash hands.
- What is Adaptation?
 - She took allopathy
 - In spite of everything she is still working

Fungal - Case 1

- She came to clinic properly dressed up, wanted to see doctor as early as possible because she cannot bear that itching and burning of skin
- SENSITIVE TO ILLNESS
- PRESENTABLE
- She has got employment, cooks outside of home and not at her home
- Because I think she gets recognition and money by working outside, at home nobody gets money and recognition
- Her friend got relief so she's here to take homoeopathic medicine
- IMPRESSIONABLE
- She wants relief as soon as possible because while working she has to scratch and it doesn't look nice in front of people
- CARRIED DESIRE FAST
- RESTLESS

Fungal - Case 1

- She came for homoeopathy as one of PT got better, so she came with OBJECTIVE REASONABLE
- Another point is she wants to relieve her itching first then other symptoms, so itching is her main concern and during itching periods she becomes restless.
- Indifference of recovery + restlessness heat during
- **Ars alb 200 6 doses over a year along with sac lac**

Fungal - Case 1

Fungal - Case 2

- This is a case of lady around 40yrs of age, she came to me with c/c of itching in the groin region. Fungal infection.
- She was wearing bright pink coloured dress with matching earrings and matching lipstick. Her son is my regular patient, he came to me for study concentration.
- Dr. Yes, how can I help u?
- Pt. I have got skin infection for a month, shown it to skin specialist but not gone completely, reddish colour with itching.
- Dr. What do u feel about it?
- Pt just smiled and said it should not increase. Cream application helps but does not make it go away completely.

Fungal - Case 2

- Dr. Any other complaint, joint pains, back pain, knee pain? I eat flax seeds for that.
- Dr: Who told you to take it?
- Pt: I read it somewhere, I keep reading.
- Dr. One important thing about patient is that she always sends me messages of spirituality as she follows Sahaj yoga, always tries to send me all the messages related to meditation, even tries to suggest you should also try doing yoga, very much health conscious, how much water to drink and all.

Fungal - Case 2

- IPR of patient- husband, wife and son
- Dr. Any stress that you have at home? Try to think and tell me.
- Pt. Only about my son, about how he will study, what will happen of him.
- Dr. Any stress about your husband?
- Pt. Not now but before there was a lot of stress, my husband and son used to fight a lot, this boy also does not do anything until and unless he is told ten times.
- Dr. Ok, so tell me something about your nature. She was sitting with folded legs.

Fungal - Case 2

- Pt. What can I say about my nature? I don't get angry quickly, her tone was mild, I am sensitive, when these two fight I get hurt, actually in childhood my husband used to beat him severely, I used to get scared that something will happen to him.
- She started weeping. Now the relation is ok but there is a wall between them.
- Dr. How is your relation with your husband?
- Pt: It is open and friendly. She was telling the father how to behave and play with kids.
- She was weeping at that time (actually I have seen her husband, typical Nux-V, not very emotional but more of practical nature).
- Dr. I asked her does your husband dominate you too, are there any restrictions, she said No, I have complete freedom, I go out also. Another important thing is that she always comes to my place with full matching outfit and make up.

Fungal - Case 2

Rubrics selected:

- Coquettish
 - Manipulative
 - Weeping narrating symptoms
 - Manipulation was core rubric
-
- Pulsatilla 30 three doses followed by 200 over 6 months completely relieved her of the fungal infection

Fungal - Case 3

A female from U.P., around 28 yrs. School Tr. Came with c/c of severe fungal infection all over the body since 3 yrs. Not relieved by treatment of skin specialist, also took 30 injections in 60 days, but no effect.

Dr: What are you feeling about it?

Pt: Why is it happening? And why me only? What's the problem?? Why not getting better even after taking so much of Rx?? I am very much troubled, full night can't sleep because of itching ++++. Dr explained, because at night you aren't doing anything so there is itching....

Pt: I didn't understand this. If I am not doing anything does it mean I keep scratching full night? Also lots of complaints because of allopathic Rx. I get irritated because not getting well even after spending money.

Fungal - Case 3

- This started during 3rd pregnancy...
All 3 Daughters... youngest 2.5yrs... Other 2, 9 and 6....
- What was stress? of daughters and work...
- Total 12 members and workload is too much. I have to handle it alone. I finish all work in the morning and then go to school, after returning immediately to the kitchen. No rest at all.
- There is tension of 3 daughters.... (weepy, voice choked)
How will their future be? What will they do?
- 3rd daughter has lots of health issues. She was fit and fine for 5 months till I was home. When she was 5 months, I started working, since then she has been unwell, not better in spite of Rx
- If now so much problem, what will happen when she grows?
Older 2 are okay.

Fungal - Case 3

Dr: Can you concentrate when in school? Or is your mind in Do?

Pt: No, I feel relaxed once in school, working for 10yrs ... I have been working since 1st child ... both older daughters adjusted well, even though I started school when they were 5-6 months old... Mother in-law is good, she used to look after my daughters well.

Only 3rd daughter didn't adjust. She falls sick 2/month.

Dr: How do you manage?

Pt: It is managed because my husband, father in-law and brother in-law are there. They look after shop so husband can take care of daughter.

Dr: Who are all in the family?

Pt: Mother in-law, father in law, husband, 3 daughters of mine, sister in-law, brother in-law and son – he is in 10th grade, he stays with us since childhood, me and my elder brother in-law, 2 sons...

Fungal - Case 3

Dr: Sister in-law doesn't help you??

Pt: She isn't staying here most of the time. She is pregnant, went to her F's home. She went away seeing so much work ... and all the load is on me.

Dr: When there is so much workload, why don't you leave your job?

Pt: It gives income. 3-3 daughters. What will happen if I also leave job and sit at home? As I said – I fully relax coming to school and family is also supportive, all – mother in-law, father in-law, husband. Mil helps me in the kitchen if I get late from work.

Dr: You will get some rest if you leave job.

Pt: No, won't get rest (laughs) because kids home full day... some guests ... when holiday, full day work goes on.

Dr: What do you like in school?

Pt: Laughing, mixing with people, meeting people, children... Don't know how time passes away... forget all tensions of home (smile and shine on her face)

Fungal - Case 3 / Rubrics selected

- Ailments from disappointment
- Domination
- Anxiety future about
- Delusion poor she is
- Undertaking things opposed to her intention
- Weeping while talking complaints, cannot give back, indifference to family members, cowardice, anxious about children
- **Sepia 200 3 doses and 1m 3 doses along with placebo over a year**

Fungal - Case 4

- PT STAYS IN A JOINT FAMILY
- FATHER, ELDER SISTER AND YOUNGER SISTER, UNCLE, COUSINS, FAMILY
- GOOD RELATIONS WITH EVERYONE AT HOME
- SAYS MY NATURE IS VERY CALM AND MILD
- NO RUDENESS
- HELPING NATURE +
- FRIENDLY +
- HOBBIES -- LOVES SINGING, LISTENING TO SONGS, MAKING BAKERY ITEMS

Fungal - Case 4

- VERY MUCH AFFECTED BY MOTHER'S DEATH 2 YRS BACK -
- SUDDEN DEATH DUE TO CARDIAC AILMENT -- HAD TO BE STRONG AT THAT TIME SINCE HAD TO TAKE CARE OF SIBLINGS AND FATHER -- HAS ELDER AND YOUNGER SISTER -- BUT SAYS ELDER SISTER IS VERY SILENT -- PT IS BOLD -- SO HAD TO DO ALL THE LAST RITES OF MOTHER TOO WAS IN THE HOSPITAL DURING HER FINAL MOMENTS -- SO CANNOT FORGET ALL THOSE THINGS NOW, ALSO THOSE THINGS KEEP COMING TO MIND, WEPT WHILE TELLING + SENSITIVE, HELPFUL, FRIENDLY NOW ALSO VERY MUCH ANXIOUS AND AFFECTED IF HEALTH OF SOMEONE IN FAMILY IS AFFECTED

Fungal - Case 4 / Prescription

- IGNATIA 200 3 DOSES GIVEN AS CONSTITUTIONAL REMEDY
- SHE IS MUCH BETTER

Fungal - Case 4 / PHOTOS

Fungal - Case 4 / PHOTOS

Fungal - Case 5

**This was a case of a businessman around 40 years presented with fungal infection of toe nail, renal calculi, headache and severe neck pain.
F/S - Pt / W / S / helper
He is very ambitious, workaholic, travels around 100 km daily driving to work and back.**

Fungal - Case 5

They were 3 brothers, he was least educated, diploma holder, all others in family were well educated, Masters holders. His parents also thought that he was less educated and could have done better. Though he said that he was never looked down upon but they didn't have confidence in him.

Fungal - Case 5

After some family discord, he decided to quit his job and start his own business to prove to his family that he can build a business and thrive on his own without support. He started his business of export of raw material in 2014, since then he is under pressure.

Dr- What is the pressure?

Pt- I have to drive daily to work around 100 km that exerts pressure on my neck

Fungal - Case 5

There is not much time left for myself and family after work. There is lot of work and challenges in business.

He then described about his consultations and medicines he was on, throughout the year.

Dr- All work and no play, how is that affecting you?

Pt- Not much, but this neck pain and headache troubles me a lot, I cannot focus on my work. I feel I should be comfortable in my health, so I can move on.

Fungal - Case 5

Dr- What is that you are worried the most?

Pt- My health and family's health and some pressure about business (15-16.4 min).

Dr- What pressure?

Pt- I am happy with my business as such, but since few years the cost of business and the responsibility has increased, I am growing and I should sustain.

Fungal - Case 5

Dr- Do you anticipate any problems or challenges ahead?

Pt- In last few years I have seen various businesses failing so I am worried. And if my health is good I can keep going. I need to take care of my health. I used to work on sundays also for my business to succeed.

Fungal - Case 5

Dr- Tell me about yourself?

Pt- If anyone make mistakes at work place, I usually don't express my anger, I just tell them softly (humility). But if I make mistake, I am hard on myself.

Later asked his wife about his nature.

Wife- He was short tempered many years back but now calmed down.

Fungal - Case 5

Dr- Why he seems so worried, why his health is affected?

Wife- Because of work, he always works. He wants to grow more, wants to be in a big position (21- 22 min). He works from morning 6 am to late night, unable to give time for himself and family. Further she elaborated about his hypertension and medicines, which were stopped after his BP came back to normal, too much of info.

Fungal - Case 5

Further she mentioned that he feels he doesn't have support, he is alone earning. He takes good care of the family, esp kids. He is very generous in spending too and doesn't think twice. He wants to prove to his family that he can alone build a business successfully.

Fungal - Case 5

The referring physician also corroborated this info that he was worried the most about kids than wife. He literally skipped the working day to take care of his son if he was not well.

He was not much communicative but always talked with people who approached.

Fungal - Case 5

This and many other small things were part of the info...

Now I had to choose my questions wisely to focus on his core adaptation other than his words / say / info from wife... the why of the case needs to be understood.

Fungal - Case 5

Dr- You don't have any big disease then why are worried so much?

Pt- I have this neck pain more than a year. I have consulted many doctors had scans and investigations done, not much problem revealed but this neck pain is too much. I feel if this problem increases then I will not be able to drive, I will not be able to reach work place and work, and my business will get affected.

Fungal - Case 5

My wife is not working, I am the lone earner, and kids are still small.

Dr- What do you do in pain?

Pt- Usually I feel better by coffee and if more pain, I take pain killers immediately so I can carry out my work and business. (30-32 min).

Further I asked about social life and leisure, he said he was active only in his business social group and carried out all activities there only.

Fungal - Case 5

My wife is not working, I am the lone earner, and kids are still small.

Dr- What do you do in pain?

Pt- Usually I feel better by coffee and if more pain, I take pain killers immediately so I can carry out my work and business. (30-32 min).

Further I asked about social life and leisure, he said he was active only in his business social group and carried out all activities there only.

Fungal - Case 5

Analysis and Evaluation

- He wanted to prove that he can survive and thrive on his own, as his family thought he was less educated and not capable.
- He was workaholic and strived hard for his business.
- But worried about health and business.

Fungal - Case 5

In all this info I focussed on his adaptation that involved his fear of business being affected for which he toiled hard, at the expense of family and me time.

He was more worried about his ill health, as it could have affected his work and business eventually.

So it narrows down to health (his and family's) and business.

Fungal - Case 5

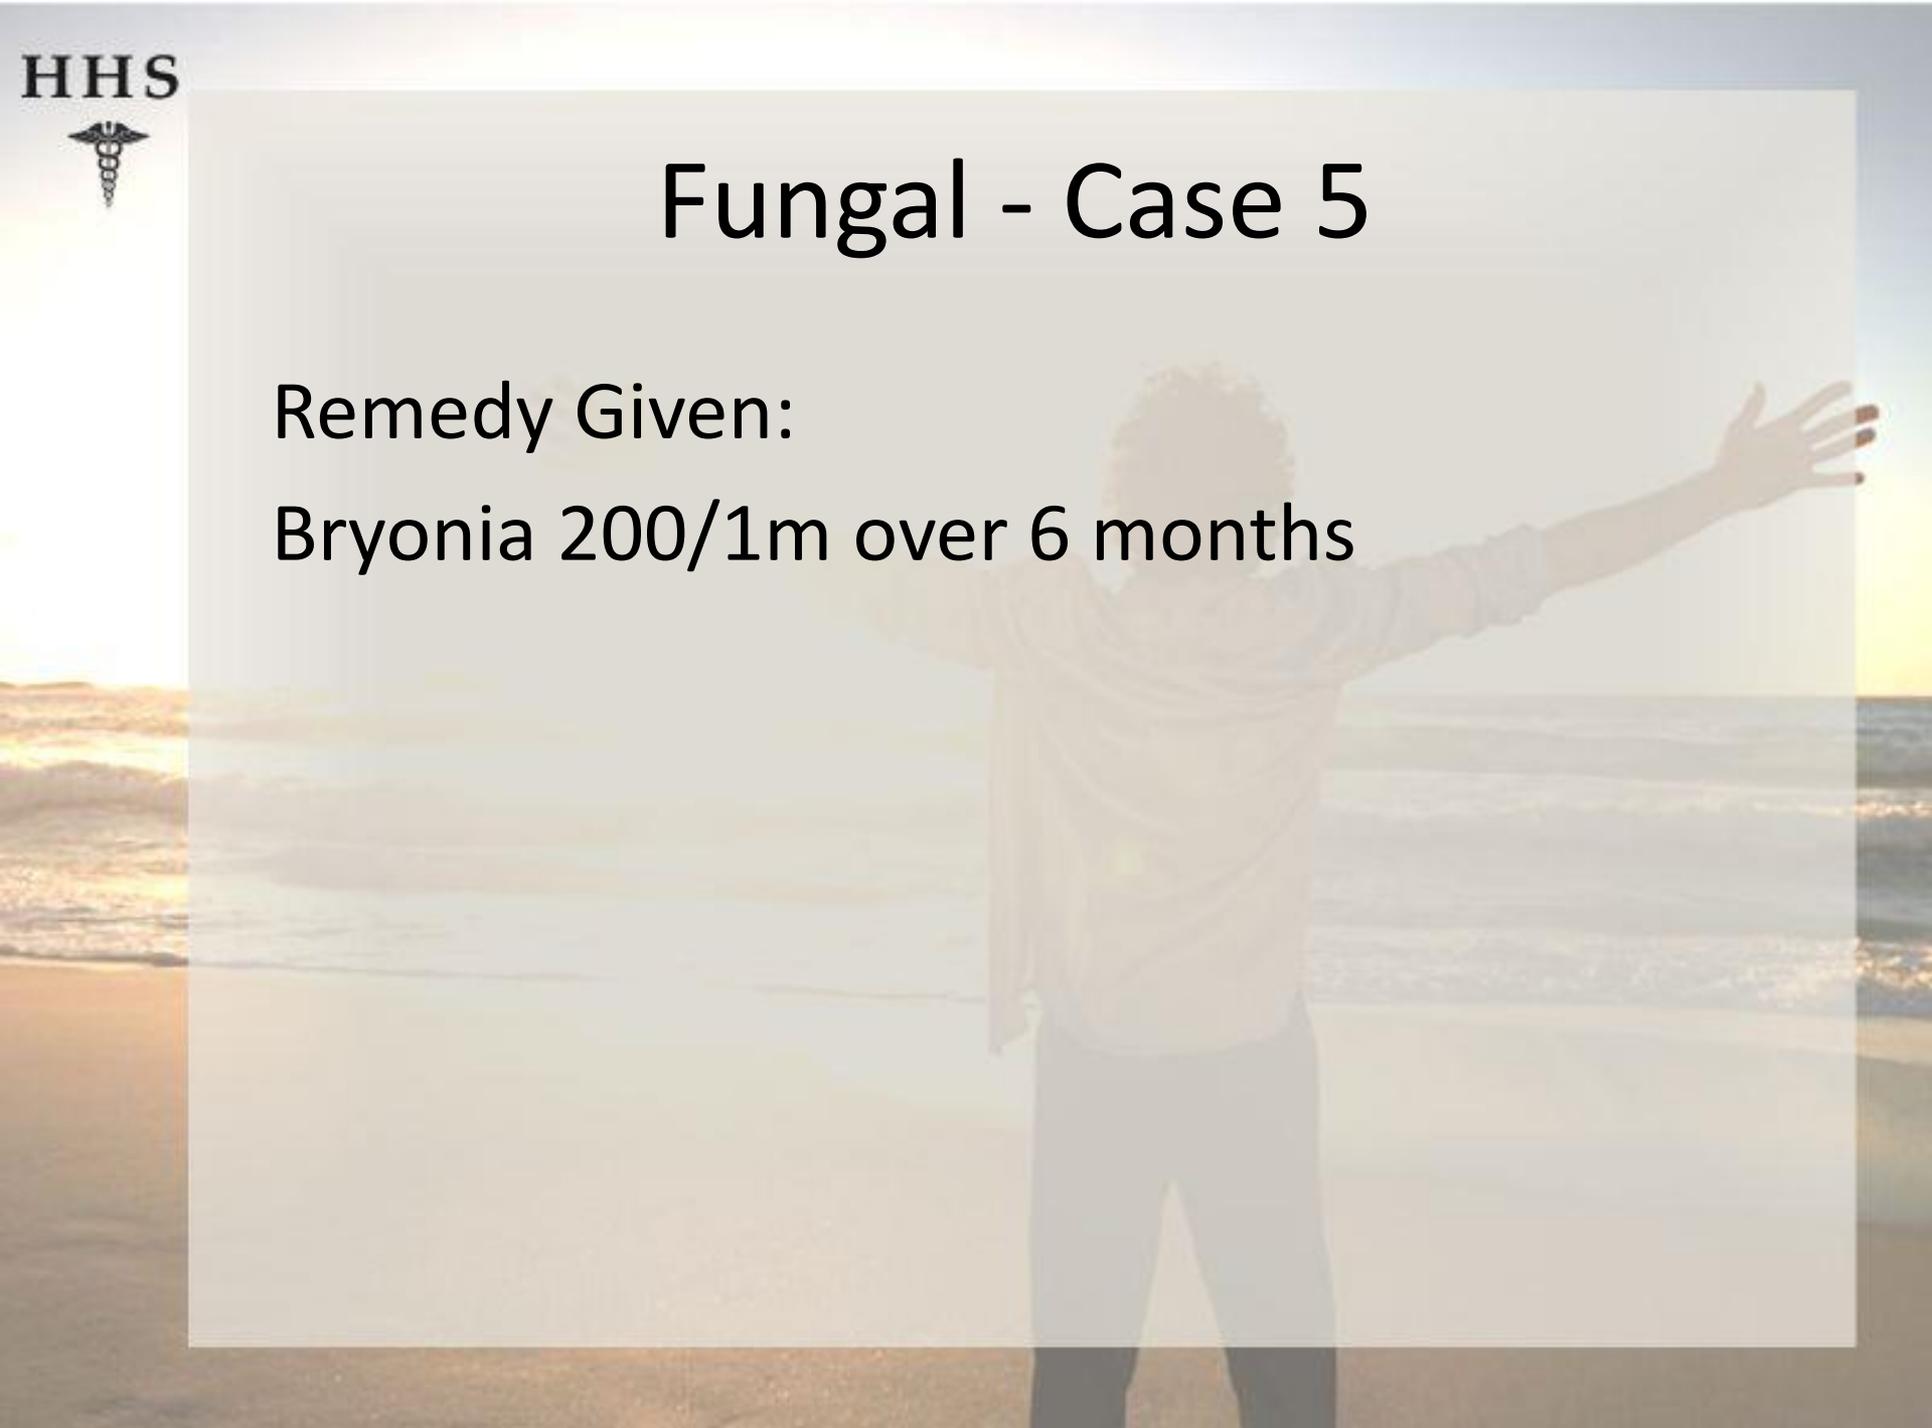

Rubrics

- **Fear business failure; of (he had this on mind continuously and worked hard to prove and sustain)**
- **Anxiety- business; about**
- **Anxiety- health about; his own**
- **Delirium- busy**
- **Ailments from- indignation (his family's treatment towards him)**

Fungal - Case 5

Remedy Given:

Bryonia 200/1m over 6 months

Fungal - Case 5

After
