HOMEOPATHY  **ESSENTIALS**

Roberto Petrucci - Viktória Németh

We are involving you into
our understanding
of homeopathy.

Homeopathy is easy
and you can make it **easy**,too.

[Our seminars →](#)

HOMEOPATHY

ESSENTIALS

Roberto Petrucci - Viktória Németh

AMPHIBIANS

AMPHIBIANS

- Frogs, toads, salamanders and newts belong to the group of amphibians.
- Amphibians are vertebrate animals because they possess spines, like fish, reptiles, birds and mammals.
- Their ancestors were the first vertebrates to 'conquer dry land' some 370 million years ago, managing to free themselves, at least in part, from life in the aquatic environment.

AMPHIBIANS

Animals that can live both in water and on land belong to the class of amphibians

AMPHIBIANS

- Amphibians are cold-blooded or ectothermic animals, like fish and reptiles
- They cannot regulate their body temperature, so this depends on the temperature of the place where they live
- Amphibians warm themselves in the sun, and to cool themselves they put themselves in the shade
- When it is very hot or very cold, amphibians fall into a kind of torpor, to reduce body activity
- It is a process that somewhat resembles hibernation

AMPHIBIANS

- Another thing common to all amphibians is the way they regulate their body temperature according to their environment
- In order to keep themselves alive, they must spend many hours in the sun, thus storing a sufficient amount of heat

AMPHIBIANS

- Amphibians can be found in almost any part of the planet, as long as there is a humid environment. However, they cannot live in very cold territories such as the poles, on some Atlantic islands or even in the desert
- Their naked skin can produce a slimy substance that protects them from drying out

AMPHIBIANS

Amphibians have thin, moist, bare skin: this means that the skin is smooth and has neither scales like reptiles, nor any other kind of covering

AMPHIBIANS

- Such a skin, as long as the animal remains in the water, is not damaged, but if the animal moves on land, the bare and thin skin exposed to the air can become dehydrated
- This is why amphibians are covered with a thin layer of mucus, produced by special glands in the skin, and if you touch them, they look slimy

AMPHIBIANS

- A common feature is the fact that **amphibians are oviparous animals, i.e. they lay eggs**
- Each species takes care of it differently, although most lay them underwater and a gelatinous substance holds them together and prevents them from dispersing

AMPHIBIANS

- Almost all amphibians **lay their eggs in water** or in very damp places
- The larvae, which breathe with their gills, can only survive in water. Following the process of 'metamorphosis', lungs appear and the larva becomes an adult

AMPHIBIANS

- All amphibians have a skin that has the same essential structure, although it looks very different depending on the species
- In general, they have a **hairless, scaleless skin that is permeable to water** and has a multitude of glands that help them perform various vital functions

AMPHIBIANS

- These animals can have **many different colours**
- In many cases, they are intended to aid camouflage
- At other times (we speak of aposematism) these bright, eye-catching hues are a warning to possible predators
- Some species of amphibians have glands that secrete powerful and even lethal venoms

AMPHIBIANS

The primary characteristic is the skin covered with a layer of keratin that prevents the animal from dehydration and also contributes to respiration (the lungs are generally not very efficient) being rich in blood vessels and different types of glands, some of which serve to keep the skin moist and thus facilitate gas exchanges with the external environment

AMPHIBIANS

There are also other glands on the skin to produce poisons against predators (toads and salamanders); others to change the color of the body (camouflage)

AMPHIBIANS

- They generally have **four well-developed limbs** and a generally fairly developed tail, if present
- Almost all amphibians develop four legs, with corresponding joints, when they become adult specimens

AMPHIBIANS

Sexual dimorphism is present, i.e. males and females are different and males may have more ability to emit sounds (vocal sacs) in comparison to females

AMPHIBIANS

There are three main groups of amphibians, which are very different from each other:

- frogs and toads
- salamanders and newts
- caecilians

AMPHIBIANS

- Frogs and toads have a stocky body.
- They have four legs and no tail when they are adults
- The hind legs of frogs and toads are highly developed and are used for jumping
- Males can make sounds

AMPHIBIANS

- Salamanders and newts have very short legs and an elongated body, ending in a long tail suitable for swimming
- They cannot make sounds

AMPHIBIANS

- Caecilians have an elongated, cylindrical body, like that of earthworms
- They are blind and have no legs; they have a very short tail and live buried in the mud
- They use their heads to dig tunnels in the soil

AMPHIBIANS

- Amphibians are oviparous animals, i.e. they lay eggs
- The female lays her eggs in water or wetlands, immersed in a kind of jelly

AMPHIBIANS

- In many amphibians, such as frogs and toads, the individual undergoes a metamorphosis before becoming an adult
- The egg transforms into a tadpole, which lives in the water and breathes through its gills

AMPHIBIANS

- As it grows, the tadpole sprouts legs and its body changes shape
- When the metamorphosis is complete, the frog has two lungs that allow it to breathe out of the water

TISSUE REGENERATION

- All **Urodela Amphibians (Newts and Salamanders)** have pronounced regenerative properties
- In **Anurans Amphibians (Frogs and Toads)**, the regenerative capacities present in the larval stage gradually diminish during development, becoming somewhat limited after metamorphosis

TISSUE REGENERATION

- Among the Anurans, **Xenopus laevis** is the one with the greatest regenerative capacity
- If we want to use homeopathic remedies from amphibians to treat tumours, we therefore have a large number of animals to choose from. Immature and mature forms of Salamanders and Newts and immature forms (larvae or tadpoles) of Frogs and Toads

TISSUE REGENERATION

A team of researchers at the Max-Planck-Institute for Cardiac and Pulmonary Research in Bad-Nauheim discovered that ***Notophthalmus viridescens***, a species of salamander, is able to regenerate not only lost limbs, but also heart muscle

TISSUE REGENERATION

The aim of the research is to discover the molecular mechanisms involved so that new therapies can be developed for patients with heart damage

TISSUE REGENERATIONI

From the homeopathic point of view, a remedy from this salamander could be useful in cardiac tumors (myxomas and rhabdomyosarcomas)

TISSUE REGENERATION

- **Salamandra atra.** This salamander is widespread in the Alps (especially in the Central and Eastern Alps) and lives between 600 and 2300 metres above sea level
- They are completely black, which could make them suitable in the treatment of **melanomas**

TISSUE REGENERATION

- In the **Darwin's Frog (*Rhinoderma darwini*)** of Chile, the males watch over the eggs laid on the ground and as soon as the larvae start to move into the egg, the males swallow them and carry them to metamorphosis in the vocal sac, which has the property of being very vascularized
- This is why it could perhaps be indicated in **laryngeal tumors as neoplastic cell growth in the larynx finds an analogy with that of tadpoles in the vocal sac of this frog**

TISSUE REGENERATION

- Even stranger is the behaviour of two species of Australian Frogs: **Rheobatrachus silus** and **Rheobatrachus vitellinus**, which incubate their eggs in their stomach: the females swallow the fertilized eggs and grow tadpoles in their stomach
- During this period, these frogs observe an absolute fast and produce no gastric juices

TISSUE REGENERATION

- The tadpoles live and develop in the stomach until the mother expels them as small, already formed frogs
- The eggs of these frogs secrete prostaglandins that block the acid secretion of the stomach and prevent peristaltic contractions

TISSUE REGENERATION

A homeopathic remedy prepared by such Frogs in this period when there is an absence of gastric juices and an absolute lack of nutrition, could be useful in cases of chronic gastritis with achlorhydria (chronic gastritis type A) and in cases of gastric cancer (even in gastric cancer something grows inside the stomach and there is also anorexia)

HOMEOPATHY  **ESSENTIALS**

Roberto Petrucci - Viktória Németh

HOMEOPATHY 8

Roberto Petrucci - Viktória Németh

REPTILES

- Camouflage, want to hide himself
- Two-face: misleading, misguiding, corruption, want to manipulate or feel manipulated or betrayed
- Violent and sudden attack
- Precocity but immaturity in adulthood
- Sexuality; provocative, violent, jealousy, seduction
- Temperature
- Acute sense in taste, smelling, touching
- Syphilitic tendency

KEY ISSUE

How to keep up the precocity in
adult ages in a dependent
relationship

HOMEOPATHY 

SUB-GROUPS

- AMPHIBIANS
- CROCODILIANS
- LIZARDS
- SNAKES
- TURTLES

AMPHIBIANS

- Dominant, want that others can serve them
- They reach their goal to keep the partner by power and money
- No taboo, no inhibition, no moral feeling

CROCODILIANS

- Abusive and possessive behaviour
- They reach their goal to keep the partner by their strength, power and muscles
- No moral feeling, no inhibition

LIZARDS

- Attention seekers
- They reach their goal to keep the partner by adapting themselves
- Have a desire for revenge but also have fear of loosing

SNAKES

- Manipulative but suspicious / dual face
- They reach their goal to keep the partner with constant seduction but when have it start to manipulate
- Narcissistic, egoistic, ready to use their power

TURTLES

- Feel constricted
- Do not know how to be independent, the relationship closes them into a cage
- Independent, want to have his own life back

HOMEOPATHY  **ESSENTIALS**

Roberto Petrucci - Viktória Németh

AMPHIBIANS IN HOMEOPATHY

SELF

- Self is split: they want to behave as the society is expecting from them, but it is hard, because their moral is completely different
- Brain fog: do not realise how they are behaving
- Tabu is not existing, do not follow the rule of morality

POSITION

- Want to be the king, the most powerful person
- Want to have a lot of money to be able to buy everything for himself
- Sexual power
- Everybody is a slave

ISOLATION

- Do not want to show himself
- Do not want to appear in a group
- Do not want to be an active member of the society because somehow they are aware of their behaviour, they feel they are different

ABANDONED

- Feel themselves dirty
- No one is loving them, because they are not that person that someone can love
- Outcast
- Self-disgust, they are hating themselves

PERSPIRATION

- Increased sweating:
 - during excitement
 - during the night while sleeping
 - head is the most affected part of the body

BRAIN

- Neurological complaints
- Epilepsy
- Mental development problems
- Brain sclerosis
- Idiocity
- Violent convulsions
- Sudden unconsciousness

GROWTH

- Tendency to tumors
 - brain
 - ovaries tumor
 - ganglia

SKIN

- Boils
- Carbuncles
- Ulcerations
- Vesicle
- Erysipelas

8 ESSENTIALS

- The self is divided, damaged and completely out of awareness
- Power, money and above all sex: he wants to be the boss, creating a prominent position for himself and being served by others (first phase)
- He wants to isolate himself to stay away from the sight of social judgment (second phase)
- He feels ashamed and abandoned with a tendency to self-loathing
- Increased sweating, especially during the night
- Affinity for the brain and nervous system (epilepsy, mental development disorders)
- Tumor pathologies
- Skin disorders (boils, carbuncles, deep ulcerations)

MAN

44 years old

SKIN COMPLAINTS

first consultation February 2018

The patient is a 44-year-old man and from the very first moments it is clear that he is not completely normal...

APPEARANCE

HOMEOPATHY 

As times passes, my feeling is confirmed: he often laughs stupidly talking about his problems...

APPEARANCE

HOMEOPATHY 

He is extremely slow in his movements and sentences

SLOWNESS

HOMEOPATHY 

As soon as he gets a little familiar, he starts using words that are not exactly... noble and, after a while, sexual allusions begin

SPEECH

HOMEOPATHY 

From sexual allusions he moved on to talking about sex openly and, if I had not changed the subject after a few minutes, it would probably have gone on all day

SEX

HOMEOPATHY 

At one point he seems to be really excited
and I notice a strange movement of his
pelvis....

SEX

HOMEOPATHY 

I like...

HOBBY

HOMEOPATHY 

MUSIC

HOBBY

HOMEOPATHY 

ANIMALS

HOBBY

HOMEOPATHY 

MATEMATICS

HOBBY

HOMEOPATHY 

I CANNOT
BELIEVE IT...

HOBBY

HOMEOPATHY 

**HE CAN DO
MULTIPLICATIONS
IN HIS HEAD THAT
I CANNOT EVEN DO
WITH A CALCULATOR**

HOBBY

HOMEOPATHY 

HOMEOPATHY 8

The term "idiot savant" is an obsolete term in psychology for Savant syndrome, where a person with neurological disorders or brain injuries displays exceptional skill in a specific field

IDIOT SAVANT

HOMEOPATHY 8

I ask him to describe his character and he basically speaks about anger, especially if he is contradicted and if others do not understand him...

RAGE

HOMEOPATHY 

The last question from a mental point of view was:
"what kind of child were you?"

"I was very shy, whenever someone I didn't know
came to the house I would go and hide,
I just couldn't stand it!"

CHILDHOOD

HOMEOPATHY 

Let's talk about your physical symptoms...

**PHYSICAL
SYMPTOMS**

HOMEOPATHY 

a book on dermatology...

SKIN

HOMEOPATHY 

My parents always tell me that I suffered from eczema as a child and the strange thing is that they say that when I scratched it was as if honey was coming out of my skin; I would flay with itching...

SKIN

HOMEOPATHY 

I suffered a lot of acne as a boy
and still have the marks...

SKIN

HOMEOPATHY 

When I was 35 I had a terrible zoster, on my left shoulder and part of my back....

SKIN

HOMEOPATHY 

And now psoriasis on
elbows and knees

SKIN

HOMEOPATHY 

From the beginning of the consultation I had noticed redness around my fingers; I asked for an explanation and he said:
"I often eat or pull the skin and then my fingers get infected; it's been like that forever, it happens to me a lot".

SKIN

HOMEOPATHY 

HOMEOPATHY  **ESSENTIALS**

Roberto Petrucci - Viktória Németh

PRESCRIPTION

MK (1.000K) - 5 drops 2 times a day

**FIRST
CONSULTATION**

HOMEOPATHY 

After 5 days the patient calls me reporting a burning sensation in his left shoulder:

"my zoster is back and it's your fault !!!"

I try to calm him down and ask him to take the remedy 5 times a day reducing the number of drops to 2 and within 24 hours the burning disappears

FOLLOW UP

HOMEOPATHY 

Psoriasis gradually improves and disappears completely after 3 years

FOLLOW UP

HOMEOPATHY 

**He stops biting his skin and
the inflammation on his fingers no longer appears**

FOLLOW UP

HOMEOPATHY 

**There are no great changes in his intelligence...
but the sexual compulsion becomes
less intense and
his way of expressing himself also changes**

FOLLOW UP

HOMEOPATHY 

I used from 2018 to 2021
potencies from 1.000K to 100.000K

FOLLOW UP

HOMEOPATHY

HOMEOPATHY

ESSENTIALS

- Para, güç ve özellikle sekse duyulan büyük arzu (nasıl elde edildiğine bakılmaksızın)
- İçsel ilkel seks dürtüsü, aynı zamanda kirli seks için, pişmanlık veya empati duymaz, "cinsel avcı" gibi (seks için manipüle edeceği savunmasız bir av arar)
- Utanmazlık, başkalarına karşı hiç hassasiyet hissi yok
- Teselli arzular ama verildiğinde reddeder
- Saflık gerçeklik tarafından yok edilmiştir
- Kurban durumu, terk edilmiş hisseder ve saflık ve saf bir öpücük arzular ("Kurbağa Prens")
- Vücut iç ve dışında soğukluk
- Dilini huzursuz ve sanki mukusla kaplanmış gibi daha kalın hisseder

MAN

32 years old

**HYPOTHYROIDISM - SCIATICA
TRIGEMINAL NEURALGIA**

first consultation June 2016

The patient is a 32-year-old man,
but I have the feeling that I am
looking at a 16-year-old boy, with
minimal facial hair

APPEARANCE

HOMEOPATHY 

He is clearly overweight and has a confident attitude

APPEARANCE

HOMEOPATHY 

I ask about childhood.
He does not know in detail the
development time
but it seems to be normal

CHILDHOOD

HOMEOPATHY 8

He has always been overweight and was discovered to have hypothyroidism at the age of 10 and has been on medication ever since. At the time of the consultation he is taking 50 mcg. of Eutirox

HYPOTHYROIDISM

HOMEOPATHY 

The discovery of hypothyroidism is made during a hospitalization

HYPOTHYROIDISM

HOMEOPATHY 

He had been suffering from pain in his right humerus for some time and he was diagnosed with an osteoid osteoma that was surgically removed

OSTEOID OSTEOOMA

HOMEOPATHY 

The main problem is a disabling right trigeminal neuralgia that has been present for several months

**TRIGEMINAL
NEURALGIA**

HOMEOPATHY 

He describes the pain as lancinating
He is unable to express any modality
but associates neuralgia with the
onset of a sensation of sweetish
saliva that appears quite often

**TRIGEMINAL
NEURALGIA**

HOMEOPATHY 

The sweetish salivation causes him a sense of disgust but he says that disgust is something he has always suffered from, he easily feels disgusted

DISGUST

HOMEOPATHY 8

For some years now he has also suffered from recurrent episodes of right sciatica

SCIATALGIA

HOMEOPATHY 

**He also complains of
frequent night sweats**

PERSPIRATION

HOMEOPATHY 

I cannot stand noises

NOISES

HOMEOPATHY 

HOMEOPATHY  **ESSENTIALS**

Roberto Petrucci - Viktória Németh

MIND

HOMEOPATHY 

MIND

TELL ME ABOUT YOUR CHARACTER

**I WAS ALWAYS IRRITABLE,
THEY TOLD MY PARENTS I WAS A DIFFICULT CHILD**

HOMEOPATHY 

**I ALREADY HAD BEHAVIOURAL PROBLEMS IN KINDERGARTEN;
THEY TOLD I WAS AN AGGRESSIVE CHILD BECAUSE I OFTEN BIT OTHERS**

HOMEOPATHY 8

ALTHOUGH I DID NOT LIKE BEING WITH OTHERS I WAS NEVER SHY IN FACT I OFTEN UNDRESSED IN KINDERGARTEN

SEX

I have masturbated a lot in my life, even as a child

I know I have to tell the homeopath everything....

I am not ashamed to say that
I spend a lot of time looking at porn sites...

YOUPOORN

Sex Dreams

FEARS

HOMEOPATHY 8

**Maybe it is related to disgust but
I am afraid of infection and contamination**

Despite the use of XMK, LMK, CMK, 200K and MK the improvements were minimal...

But since the sciatica problem has not recurred the patient says he wants to continue and tells me:

Maybe we can change remedy....

FOLLOW UP

HOMEOPATHY 

OF COURSE !!!!

BUT WHICH REMEDY ???

FOLLOW UP

HOMEOPATHY 

NEW PRESCRIPTION
30CH 5 drops 2 times a day

FOLLOW UP

HOMEOPATHY 

After 3 days, an attack of trigeminal neuralgia appears, which resolves in half a day by taking the remedy 3 times at 2' intervals and then every 30'

FOLLOW UP

HOMEOPATHY 

Trigeminal neuralgia has not occurred since then

FOLLOW UP

HOMEOPATHY 

**He reports less anger but
no change on sexual compulsions**

FOLLOW UP

HOMEOPATHY 

NEW PRESCRIPTION
200CH 3 drops 2 times a day

FOLLOW UP

HOMEOPATHY 

**After 1 month no change
200CH 5 drops 2 times a day,
increasing by 1 drop every 2 weeks**

FOLLOW UP

HOMEOPATHY 

**After 2 months the patient reports
greater control of sexual urges
200CH 10 drops 2 times a day**

FOLLOW UP

HOMEOPATHY 

**The patient starts losing weight and
TSH drops from 5.2 to 2.4**

FOLLOW UP

HOMEOPATHY 

**Endocrinologist reduces Eutirox to 25 mcg.
and after 1 year discontinues it completely**

FOLLOW UP

HOMEOPATHY 

The patient loses 22 kg.

FOLLOW UP

HOMEOPATHY 

After 6 months, all symptoms have disappeared except night sweating, which has improved by 50%

FOLLOW UP

HOMEOPATHY 

AMPHIBIANS

- The self is divided, damaged and completely out of awareness
- Power, money and above all sex: he wants to be the boss, creating a prominent position for himself and being served by others (first phase)
- He wants to isolate himself to stay away from the sight of social judgment (second phase)
- He feels ashamed and abandoned with a tendency to self-loathing
- Increased sweating, especially during the night
- Affinity for the brain and nervous system (epilepsy, mental development disorders)
- Tumor pathologies
- Skin disorders (boils, carbuncles, deep ulcerations)

HOMEOPATHY  **ESSENTIALS**

Roberto Petrucci - Viktória Németh

NEOTENÌA

neotenìa s. f. [comp. *neo-* e tema ΤΕΥ- from greek ΤΕΪΨΩ «extend, prolong»].

- **1.** In zoology:
 - **a.** The phenomenon whereby an organism reaches sexual maturity while retaining larval or juvenile characters, as a result of environmental factors (and in this case, changing these conditions can lead to metamorphosis) or genetic factors.
 - **b.** The condition peculiar to a character that occurs permanently in the larval or juvenile phase (e.g. in humans, the lack of dense hair on the body, which is characteristic of all adult primates)
- **2.** In botany, reaching sexual maturity at a primitive, poorly differentiated stage of development, as occurs in the male and female gametophytes of spermatophytes

JERARCHY

- Neoteny makes me think of a young body in an adult mind with a developed sexuality from a young age
- The patient has had an osteoid osteoma: amphibians have an enormous regenerative capacity and can be remedies for tumor diseases
- I need a remedy for hypothyroidism
- I need a remedy for trigeminal neuralgia and sciatica
- I need a remedy for disgust and easy irritability

PROVING

Dahl Heike
c3-in-berlin

- neuralgische Schmerzen; im Gesicht rechts Trigeminus
- neuralgic pain; in the face on the right trigeminal nerve
- ischias schmerzhaft
- sciatica painful

MATERIA MEDICA

Dr. Paul Theriault

- We can discern the picture of a teenager experiencing sexual desires and taboos
- Irritability, impatience, aggression, impulsiveness
- Disgust, feels contaminated
- Do not wish to socialize
- Sexual dreams

MATERIA MEDICA

Dr. Paul Theriault

- Sweat at night
- Neuralgic pain in right trigeminal nerve
- Sciatica
- Sweet tasting saliva

HOMEOPATHY  **ESSENTIALS**

Axolotl

HOMEOPATHY 8

AMBYSTOMA MEXICANUM

Neoteny is an amazing phenomenon
that affects this Species, as well as other Salamanders

Axolotl

- **Axolotl** is the neotenic form of **Ambystoma mexicanum**.
- **Ambystoma mexicanum** is able to **become sexually mature**, and thus be able to reproduce, **while retaining gills, an aquatic mode of life and other larval characteristics** (neoteny phenomenon)
- These individuals that do not metamorphose are called **Axolotl**.

Ambystoma mexicanum

This animal therefore reaches sexual maturity and is able to reproduce while remaining a tadpole (infant form)

Circumstance that could lead to this amphibian being included in the rubric on sexual activity in children:

- **MALE - ERECTIONS - children; in**
- **MALE - HANDLING GENITALS - child: bufo**
- **MALE - MASTURBATION; disposition to - children; in: bufo**
- **MALE - SEXUAL DESIRE - increased - children; in**
- **FEMALE - MASTURBATION, disposition to - children; in: bufo**
- **FEMALE - SEXUAL DESIRE - increased - children; in**

- For similar reasons, this remedy may perhaps prove useful in early puberty
- Sometimes an **Axolotl** can metamorphose spontaneously, this happens in 1 in 10.000 cases, or **metamorphosis can be induced by administering thyroid hormones or thyrotropin**
- In fact, in **Ambystoma mexicanum**, the pituitary gland does not release any thyrotropin, so no T3 synthesis can be activated in the thyroid, making metamorphosis impossible

- *This fact could be exploited homeopathically in cases of hypothyroidism (Axolotl is a constitutional hypothyroid)*

- **GENERALS -
HYPOTHYROIDISM**

A close-up photograph of an axolotl, a pinkish-white aquatic salamander with prominent feathery gills. The image is darkened to serve as a background for text.

TISSUE REGENERATION

Another even more surprising property of Axolotl is its **ability to regenerate its own tissue**

TISSUE REGENERATION

This animal is able to heal from any mutilation it can survive, limbs, eyes, tail and even internal organs can be completely regenerated

TISSUE REGENERATION

All animals have regenerative capacities, but as one moves up the evolutionary ladder, this capacity diminishes; in mammals, including man, it remains with minimal potential

TISSUE REGENERATION

Planaria, flatworms [**Phylum Platyhelminthes**] have enormous regenerative potential

If they are cut in two, the stump with the head regenerates the tail and the stump with the tail regenerates the head, so that two intact individuals result

TISSUE REGENERATION

Starfish quickly regenerate amputated arms and some species from a removed arm are able to regenerate a complete individual, provided that this arm contains at least $1/5$ of the central disc

TISSUE REGENERATION

Axolotls, and all caudate amphibians (Urodela), have retained a regenerative capacity almost on a par with these simple animals. Obviously, given the greater complexity of Axolotls, it is not possible for them to be cut in two from each part and regenerate the missing part, but amputated organs regenerate, giving rise to complete and well-perfected organs that are indistinguishable from the original ones

TISSUE REGENERATION

Other complex animals can also replace amputated parts, but the process always shows some imperfection, e.g. lizards can regenerate their tails, but the vertebrae are replaced by a cartilaginous cord

TUMORS

- *Planaria, Starfish, Axolotl and other Salamanders, some fish (e.g. Zebra fish) and all other animals with strong tissue regenerating abilities could be indicated in tumors, precisely because of the analogy between the strong replicative drive of cancer cells and the regenerating tissue drive of these animals*
- *Asterias rubens has long been described in homeopathic literature as a remedy for breast cancer*

TUMORS

From the homeopathic point of view, the remedy from Axolotl, precisely because of its regenerative abilities, might be able to act favorably in tumors

As Axolotl is able to regenerate limbs its homeopathic use could be favorable in osteomas, osteosarcomas and rhabdomyosarcomas

- EXTREMITIES - CANCER - Bones - osteosarcoma
- EXTREMITIES - CANCER - Bones - tibia - osteosarcoma
- GENERALS - CANCEROUS affections - sarcoma
- GENERALS - CANCEROUS affections - Bones, of:
- GENERALS - TUMORS - osteoma

- 
-
- *In Axolotl, amputated limbs regenerate and tumors do not form because there are regulatory factors that organize the proper growth of the regenerating limb*
 - *These same regulatory factors present in Axolot could, if administered to patients with tumors, lead to the differentiation of neoplastic cells, hopefully leading the patient to recovery*

AXOLOTL

- We can well understand that **Axolotl's strong regenerative capacity**, which is superior to that of other salamanders, is probably due to the fact that this animal retains its larval form, i.e. an early stage of development (in fact it corresponds to an embryonic state)
- In this salamander, the reproductive system and germ cells mature, while the rest of the body does not develop and retains its juvenile form throughout life

- 
- **Ambystoma mexicanum**, does not undergo metamorphosis in nature because its pituitary gland does not release a thyrotropin that activates thyroid hormone synthesis in the thyroid gland
-
- In natural populations, the metamorphosed form of *Ambystoma mexicanum* is not found, but if a young Axolotl is taken and reared in water by adding thyroxine, the gills regress and the skin changes significantly, in short, complete metamorphosis occurs
 - This means that it is the thyroid hormones that enable metamorphosis in amphibians

In fact, **Axolotl**, because they have not undergone metamorphosis, are like embryonic tissue and could conceivably be useful in the therapy of malignant tumors by providing the differentiation factors necessary for the normalization of cancer cells

Ambystoma mexicanum (Axolotl) is native to Lake Xochimilco, south of Mexico City

Recently, this amphibian has been at risk of extinction because it is hunted for food. It used to be a delicacy offered to tourists, but is now a protected species

Mythology can also reveal something interesting: "...since the sun did not move, the Aztec gods decided that, in order for the sun to begin to rise, and for the whole great wheel of life to begin to move with it, one of them would have to be sacrificed

Xolotl was the chosen one. The god then fled and was pursued. Hunted everywhere, he assumed all possible forms, tried the most bizarre metamorphoses... The fugitive's last exploit, before being dragged to the sacrifice, was in the form of Axolotl, hidden underwater, his incredulous eyes wide open..."

Xolotl flees from death, but the sacrifice could also be interpreted as responsibility, in which case Xolotl flees from his responsibility, the last attempt he makes is to transform himself into the salamander that does not metamorphose, that remains infantile, that does not want to grow

Is it conceivable to include Axolotl in the following rubrics ?

- **MIND – FEAR – murdered, of being**
- **MIND – FEAR – responsibility**
- **MIND – RESPONSIBILITY – aversion to**

Since Axolotl is the Salamander that remains at an early stage of development, that does not grow, presumably it should be a great remedy for childhood, and in particular for those children who have developmental problems

- **GENERALS - DEVELOPMENT - arrested**
- **GENERALS - DEVELOPMENT - slow**

- ***Despite its harmless and defenceless appearance, this animal can develop the most heinous behaviour found in nature: cannibalism***
- ***The animal that is predestined for sacrifice (see mythology) and also destined to constitute a tasty dish (Axolotl is perhaps the only salamander that makes it onto a menu), becomes cannibal***
- ***The animal that hides itself so as not to be found and sacrificed-eaten, at a certain point becomes aggressive and turns its aggression towards its fellows by cannibalizing them***

- ***An Axolotl that becomes cannibalistic grows faster and can metamorphose more easily***
- ***In a way, the price for growing is cannibalism***
- ***It is as if in order not to become cannibal Axolotl prefers not to grow up, to remain a 'child'. Yet potentially he is a cannibal***
- ***From a homeopathic point of view, the remedy from Axolotl could be useful in subjects, especially children with difficulties in managing their aggressive impulses, e.g. children with a tendency to bite***

- **MIND - BITING - children, in**

HOMEOPATHY  **ESSENTIALS**

HOMEOPATHY  ESSENTIALS

Roberto Petrucci - Viktória Németh

KAMBO

- Kambo is a healing ritual used mainly in South America. It takes its name from the poisonous secretions of the giant monkey frog or *Phyllomedusa bicolor*.
- The frog secretes the substance as a defence mechanism to kill or subdue animals that try to eat it. Some humans apply the substance to their bodies for its supposed health benefits.

KAMBO

- Indigenous people have used kambo for centuries to heal and purify the body by strengthening its natural defences and warding off bad luck. It was also believed to increase stamina and hunting skills
- Today, shamans and naturopaths still use it to purify the body of toxins, as well as to treat numerous health conditions

KAMBO

Despite the lack of research, proponents of kambo believe it can help with a range of conditions, including Alzheimer's, anxiety, cancer, chronic pain, depression, diabetes, addictions, hepatitis, HIV, infections, infertility, rheumatism, vascular problems

KAMBO

- The first part of the process consists of drinking about a litre of water or cassava soup
- Next, a burning stick is used to create a series of small burns on the skin, causing blisters. The blistered skin is then scraped off and kambo is applied to the wounds.

KAMBO

- From the wound, kambo enters the lymphatic system and bloodstream, where it is said to run around the body looking for problems. This usually results in some immediate side effects, particularly vomiting.
- Once these effects begin to wear off, the person will be given water or tea to help expel toxins and rehydrate

KAMBO

Traditionally, kambo was administered in the shoulder area; now it is often administered on the chakras

Kambo causes a number of unpleasant side effects. The first is usually a heat wave and reddening of the face

KAMBO

Other effects quickly followed, including:

- nausea
- vomiting
- diarrhea
- abdominal pain
- vertigo
- palpitations
- lump sensation in the throat
- difficulties in swallowing
- swelling of lips, lids and face
- loss of bladder control

KAMBO

Symptoms can vary in severity

They generally last between 5 and 30 minutes, although in rare cases they can last up to several hours

KAMBO

- There are many people who have reported good results after doing a kambo ceremony, but there is little scientific evidence to support these claims
- Experts have studied kambo for years and documented some of its effects, such as stimulation of brain cells and dilation of blood vessels, but none of the existing research supports the health claims surrounding kambo.

KAMBO

Along with the intense and very unpleasant effects that are considered a normal part of the ritual, kambo has been associated with several serious effects and complications

KAMBO

Possible risks of kambo use include:

- severe and prolonged vomiting and diarrhea
- dehydration
- muscle spasms and cramps
- convulsions
- jaundice
- confusion
- scars

KAMBO

Kambo has also been linked to toxic hepatitis and death

It is best to avoid kambo in cases of:

- cardiovascular problems**
- history of stroke, cerebral haemorrhage, aneurysm**
- depression, anxiety and psychosis**
- hypotension**
- epilepsy**
- Addison's disease**

KAMBO

Kambo is legal but not regulated by the Food and Drug Administration or any other health organization; this means that there is no supervision of quality or contaminants in the product
