CARNIVOROUS PLANTS

CARNIVOROUS PLANTS

NATURE

HOMEOPATHY 🛞 ESSENTIALS

Roberto Petrucci - Viktória Németh

 There are over 600 known species of carnivorous plants belonging to different families

 Carnivorous plants are plants that derive some or most of their nutrients from trapping and consuming animals, typically insects and other arthropods, and occasionally small mammals and birds.

Carnivorous plants are commonly found in habitats with **nutrient-poor soils**, such as:

- acidic bogs
- marshes
- swamps
- and other wetland environments

These habitats typically lack sufficient nitrogen and phosphorus, forcing these plants to rely on carnivory as an alternative nutrient source

Definition

Plants are considered carnivorous if they have these five traits:

- 1. capture prey in traps
- 2. kill the captured prey
- 3. digest the captured prey
- 4. absorb nutrients from the killed and digested prey
- 5. use those nutrients to grow and develop.

Other traits may include the attraction and retention of prey.

Adaptation for Prey attraction

- Carnivorous plants do not actively hunt or seek out their prey like animals do
- They rely on their traps and attractants, such as colorful or scented structures, nectar, or pheromones, to lure insects and other small organisms into their traps

Trapping mechanism

Five basic trapping mechanisms are found in carnivorous plants.

Pitfall traps

- Trap Structure: Pitfall traps consist of a modified leaf that forms a deep, tubular structure or "pitcher." The pitcher has a wide mouth or opening that narrows down into a tubular chamber, often filled with digestive fluids. (Open with pool of water or Covered or no pool of water)
- **Prey Attraction**: The pitcher plants employ various mechanisms to attract prey. They may produce nectar, have brightly colored or patterned surfaces, or emit attractive scents that lure insects towards the pitcher opening.
- Slippery Surfaces: The inner walls of the pitcher are typically smooth and slippery, making it difficult for prey to climb back out once they fall into the trap.
- **Trapping the Prey**: Insects, attracted by the lure, land on the rim of the pitcher and may accidentally slip or lose their footing due to the slippery surfaces. They then fall into the tubular chamber, unable to escape.
- Like: Nepenthes, Heliamphora, Cephalotus, Brocchinia, Catopsis, Sarracenia purpurea and S. rosea)

Flypaper traps

- Glandular Hairs: Plants that utilize the flypaper trap have leaves covered in specialized glandular hairs or tentacles (fixed tentacles or mobile tentacles). These tentacles produce sticky secretions or mucilage.
- **Prey Attraction**: The glands on the tentacles secrete nectar or emit attractive scents that entice insects to land on the leaf surface.
- Sticky Capture: When an insect lands on the leaf, it becomes stuck to the adhesive secretions produced by the glandular hairs. The sticky substance immobilizes the prey and prevents its escape.
- Like: Pinguicula, Drosera

Snap traps

- **Specialized Leaf Structure**: The snap trap is formed by modified leaves that are hinged at the center. These leaves typically have two lobes with sensitive trigger hairs on their inner surfaces.
- **Prey Detection**: When an insect or other small organism comes into contact with the trigger hairs, it stimulates the trap. The trigger hairs act as sensors that detect the presence and movement of prey.
- **Rapid Closure**: If the trigger hairs are stimulated multiple times within a short period, the trap is triggered and rapidly closes. The two lobes of the trap fold together, forming a sealed enclosure with the prey trapped inside.
- Mechanical Trapping: The closure of the trap creates a tight seal, preventing the escape of the captured prey. The leaves interlock, creating a secure chamber.
- Like: Dionaea, Aldrovanda

Bladder trap

- Bladder Structure: Bladderworts possess small, bladder-shaped structures called "bladders" or "utricles" that are typically found along the stems or submerged in the water.
- Suction and Trigger Mechanism: The bladders have a small opening or trapdoor covered by a sensitive trigger mechanism. When triggered, the trapdoor opens rapidly, creating a suction force inside the bladder.
- **Prey Capture**: The suction force generated by the opening of the trapdoor creates a vacuum-like environment within the bladder. This sudden change in pressure creates a strong inward flow of water, along with any organisms in the vicinity, into the bladder.
- Immobilization: Once inside the bladder, the prey becomes trapped, as the inward-flowing water prevents their escape. The bladder is designed to be watertight, ensuring that the captured organisms remain submerged within the trap.
- Like: Utricularia

Lobster-pot traps

- **Prey Attraction:** The traps of lobster-pot plants often secrete nectar or produce bright colors to attract prey, particularly small invertebrates like water fleas or other aquatic organisms.
- Entrance and Exit: The entrance of the trap is designed to allow easy access for potential prey. However, the interior of the trap contains downward-pointing hairs or bristles that make it difficult for the prey to escape.
- **One-Way Passage**: Once the prey enters the trap, it encounters the downward-pointing hairs or bristles. These hairs or bristles allow the prey to move further into the trap, but prevent it from moving back out.
- **Smooth Inward Surface**: The interior walls of the trap are usually smooth, making it challenging for the trapped prey to climb or navigate their way back to the wider entrance.
- Like: Darlingtonia, Sarracenia psittacina

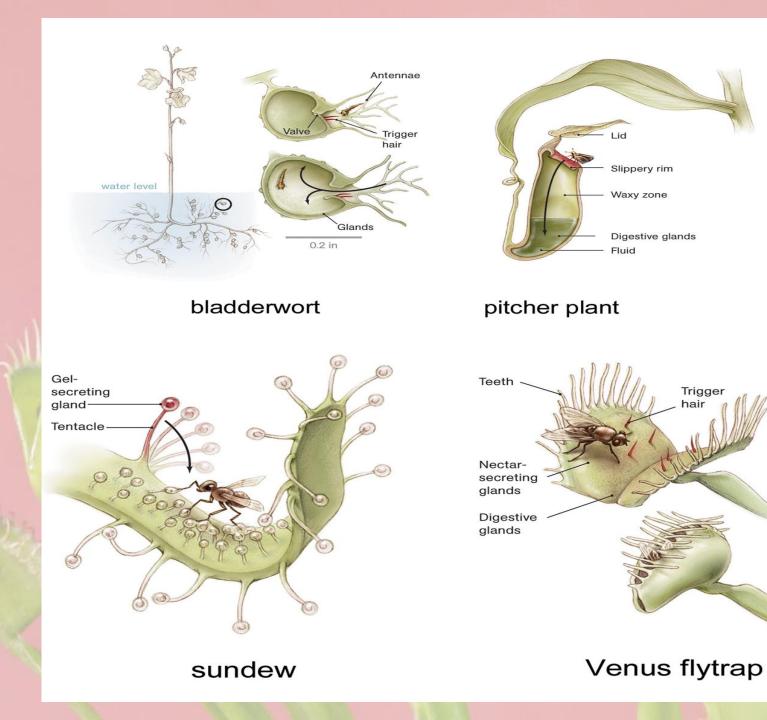

DIGESTION

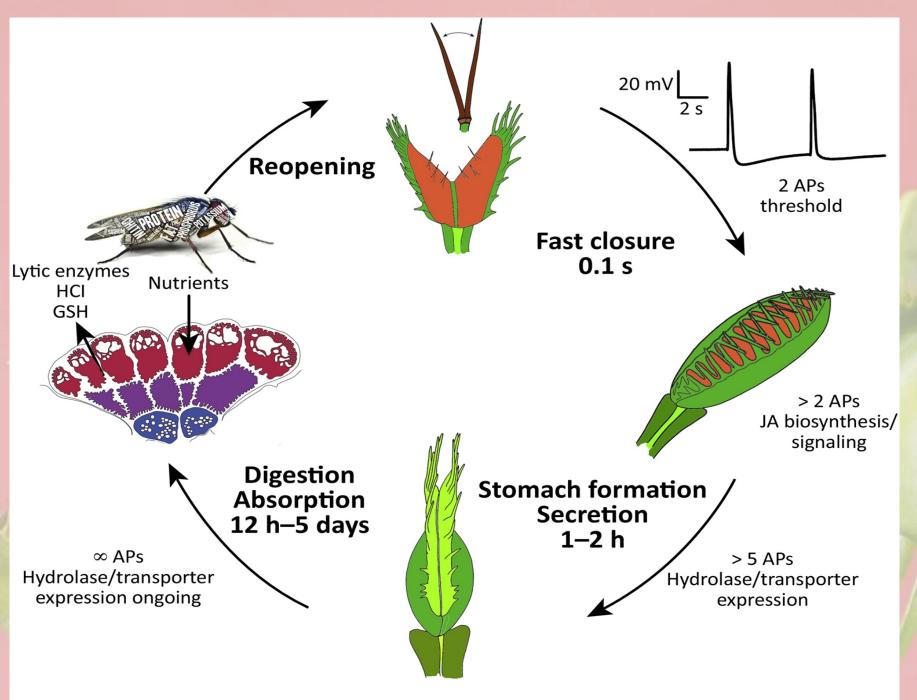

Once the prey is trapped and digested, carnivorous plants absorb the released nutrients through specialized cells in their leaves or traps. These plants have modified glandular structures that facilitate the absorption of nitrogen, phosphorus, and other essential nutrients (K+, Na+, Ca2+ and Mg2+) derived from the digested prey.

Trends in Plant Science

MEDICAL USE

A study published in 2009 by researchers from Tel Aviv University indicates that secretions produced by carnivorous plants contain compounds that have

anti-fungal properties

and may lead to the development of a new class of anti-fungal drugs that will be effective against infections that are resistant to current anti-fungal drugs.

Roberto Petrucci - Viktória Németh

CARNIVOROUS PLANTS IN HOMEOPATHY

"The most wonderful plants in the world !"

Charles Darwin

Plants that get their own back on animals

Behaviour

 Restlessness, irritability, and a tendency to be easily provoked or agitated. They are impulsive and have quick reflexes.

(first phase)

Rage, fury, violence and madness with suicidal disposition

(second phase)

Depression, fears, anxieties, cannot stay alone

(third phase)

Victim

- Overwhelmed
- Powerless in their circumstances, relationships
- Emotional struggles
- Lack of sense of control over their lives
- Loosing the ability of being resilient
- Loosing the self-support for adaptation

Executioner

- Being and executioner for them means to survive, to face challenging circumstances or environments
- They act quick with power
- Have a huge inner strength
- Think without much forethoughts
- Strong and quick reaction

Attraction

- Deep craving for attention
- Craving for recognition
- Seek external validation
- Strong desire to be noticed
- Strong desire to be admired
- Easily trust and easily lost it

Deception and betrayal

- Deception for them means survival and adapt ownself in challenigng situations/environment
- Survival for them is not as easy because they easily can loose their emotional balance
- For them one and the most mportant thing is self-discovery and overcoming obstacles

Trapped and Stuck

- Sensation of being trapped
- Sensation of being stuck or imprisoned
- Unable to move forward in life (physically, emotionally and psychologically)
- Not being able to see the new possibilities
- Sensation of being confined / constricted (physically, emotionally and psychologically)

Competition

- They look like animals, but there is no competition or sexuality
- Seeking for attention and reacting quickly for self defense means for them to protect their own emotions
- It is difficult for them to be opened and in the meantime to keep the self-protection
- Competition and seduction for them means self-discovery

Sensitivity

- Sensitivity and reactivity is more important than to survive
- They are highly sensitive and highly reactive people
- Survival is a self-defense, to protect and not to triggger their sensitive phisical and emotional body
- They can have exaggerated reactions (physically and emotionally)
- They sensitive for environment factors, emotions, stimuli even medications

Respiratory complaints

- Asthma
- Asphyxia
- Dry cough
- Spasmodic cough
- Sticky discharges
- Do not tolerate the touch (in general, but when sick they can be hypersensitive to touch or pressure)

Gastrointestinal

- Digenstive disturbances
- Indigestion
- Bloating
- Discomfort feeling after eating
- Issues in absorbing and assimilating nutrients

SN CARNIVOROL

- Victim and executioner
- Attracting and luring
- Clever deception and betrayal
- Trap, constriction, claustrophobia and suffocation
- No competition nor sexuality (differential diagnosis animal kingdom)
- Sensitivity more prominent than survival
- Respiratory complaints: asthma, asphyxia, cough dry and spasmodic
- Gastrointestinal tract complaints with nutrition and assimilation complaints

WOMAN

40 years old

ENGINEER

EAR NOISES

MIGRAINE WITH AURA

first consultation: DECEMBER 2012

- MENARCHE: 11 years
- REGULAR MENSES
- MENSES DURATION 6 days
- MENSES-RELATED COMPLAINTS
- BEFORE: irritability, nervousness, melancholy

GYNECOLOGICAL PROBLEMS

- DELIVERY DATES: 2006 2008 2011
- ABORTIONS: 1 spontaneous in 2007 (7th week)
- CONTRACEPTIVE PILL (Diane) FROM 18 to 28 years of age prescribed by a dermatologist to treat androgenetic alopecia
- SIDE EFFECTS FROM CONTRACEPTIVE PILL: swelling, water retention

GYNECOLOGICAL PROBLEMS

- Androgenetic alopecia since the age of 13, which appeared following a move to another city with the consequent loss of friendships, ties, affections then difficult to rebuild
- Initially treated with supplements and carbonic snow applications (until the age of 18), then with Diane and Cyproterone Acetate

ALOPECIA

- The problem was never solved
- Since 2000 I no longer take any medication and I am an implant carrier
- The implant is very demanding: it has to be removed every 3 weeks to clean it

ALOPECIA

- Everything started when I was 13 when I moved to another town, a small town 30 km away
- When my parents told me they were moving I felt something BREAKING inside; from there I started to have hair loss with thinning that increased over time
- I didn't want to go at all and I cried a lot

MOVING

- I was like TORN and carried there by weight
- I didn't want to leave my friends
- In the old town I had friends, in the new town I didn't
- It was AS IF I WAS SPLIT INTO TWO

MOVING

When I was at school it was fine; when I came home I was in an abyss

ABYSS

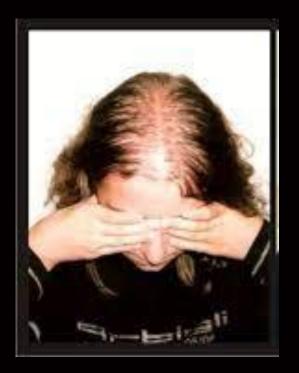

• We had to move because grandfather couldn't live alone any more

 I couldn't digest the fact that my father's sisters didn't do anything even though they lived in the same village as grandfather

I DID NOT DIGEST...

I became aware of the thinning after the announcement of the move

HAIRS

- I'm suffering from migraine with aura then headache in the frontal area appears, pulsating, lasting a few hours
- In 2008 in the 7th month of pregnancy I started to have strange sensations in the left eye (bands, flickerings), then tingling in the hand radiating to the arm
- In the Hospital I underwent neurological examination and EEG then negative MRI

MIGRAINE WITH AURA

- After 2 months another episode with numbness also in the face (left side), tongue and left leg
- After the aura usually migraine on the right side; only once visual disturbance in the right eye and disturbances in the right part of the body

MIGRAINE WITH AURA

- The aura usually lasted between 15 and 30 minutes
- Migraine lasted 2 3 hours and disappeared spontaneously
- In the following days strange perception of the space around, as if wearing glasses too strong
- After the second pregnancy complaints 1 2 times a month until April 2009

MIGRAINE WITH AURA

Since the first delivery, tinnitus in the right ear and in April 2009 the doctor prescribed beta-histine dihydrochloride 16 mg. at the change of season for 10 days a month with partial improvement

TINNITUS

• THE TINNITUS IS SYNCHRONOUS WITH THE PULSE

• The auras no longer returned and the tinnitus was improved; since the end of September 2012 it has worsened again

TINNITUS

At the end of September 2012 she stopped breastfeeding and in the last 2 months has had 3 episodes of auras (only visual) lasting 15' with then pulsating migraine

AURA CAME BACK

- From 1 to 10 November she took betahistine dihydrochloride 24 mg. with side effects: dizziness, sensation of faintness, low blood pressure (90/60)
- At that point the doctor advised taking 16 mg. but she was afraid and she has not taken it so far

TINNITUS

READING - TRAVEL - SPORTS (running and spinning - before 3 children) currently no any sports

HOBBIES AND SPORT

MIND

I am a perfectionist, I hardly delegate, I would like to do everything myself and everything well

- She worked in an architecture and engineering office
- Now mainly involved in energy certification
- She is not unhappy, it's a good compromise

- I SUBMIT with my mother-in-law and then I RETALIATE with my husband
- My mother-in-law is someone I CANNOT DIGEST

MOTHER-IN-LAW

- As a child I often dreamt of falling into a ravine (in the shape of a pipe)
- I would walk on the edge of the ravine tiled with light green tiles which were those of my grandmother's bathroom and then fall into the ravine and waking up I would feel the sense of falling into the void
- It's a dream I had many times as a child

RECURRENT DREAM

- It's a geometric ravine like a swimming pool but very very deep with vertical sheer walls, not the classic earth ravin
- A kind of tube, of a very deep swimming pool but I couldn't see the water
- I was walking on the edge and at a certain moment I was sliding in

RECURRENT DREAM

MK 3 drops 1 time a day

FIRST CONSULTATION

- Tinnitus reduced by 50% as intensity; frequency and duration unchanged
- It always worsens with certain movements (bending forward) and especially with exertion

- MENSES-RELATED DISORDERS BETTER (irritability, nervousness, melancholy)
- No more crying fits

- AURA, MIGRAINE AND PHOTOPHORBIA (including visual disturbances when there is a lot of light) ARE CLEARLY IMPROVED
- I HAVE HAD NEITHER AURA NOR MIGRAINE SINCE I STARTED WITH HOMEOPATHY

- I FEEL MORE ENERGETIC THAN BEFORE
- THE SITUATION WITH MY MOTHER-IN-LAW IS STABLE but my mood improved without any external factors causing the improvement

MK 7 drops 2 times a day

- She had no Covid
- No more aura or migraine
- No more dizziness or vertigo; just a few sporadic light sensations that immediately disappeared (related to tiredness)

- Photosensitivity much improved compared to before but it still bothers me a bit driving in the evening
- No more tingling

- Regular menses; usually between 25 and 30 days
- No complaints related to menses

- Tinnitus fine during the day; in the evening lying down slightly annoying (amelioration 90% compared to first consultation)
- No more excoriations on scalp

- Stomach fine
- Intestine regular

Mood is good

Also her mother-in-law is fine...

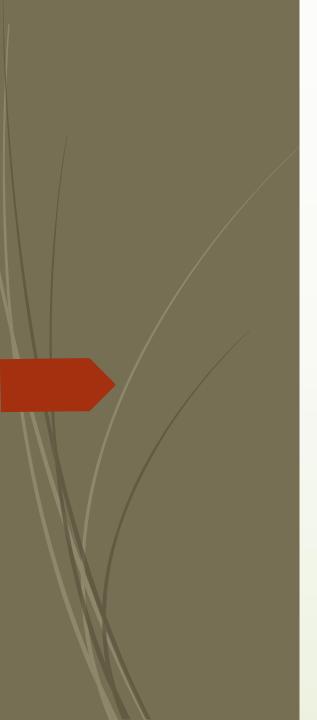

- Over the years she has taken the remedy in various potencies and with different frequencies
- In certain moments the remedy was discontinued and only taken when needed

SOME RUBRICS OF THE PRESCRIBED REMEDY

UNITING REPERTORY, MATERIA MEDICA AND PATIENT INFORMATION IN A SINGLE INTUITIVE INTERFACE

HEAD - HAIR - falling HEAD - PAIN **VISION - COMPLAINTS of vision VISION - DIM - headache - during EYE - PHOTOPHOBIA** EAR - NOISES in - swashing EAR - NOISES in - synchronous with pulse **NOSE - EPISTAXIS**

SARRACENIA PURPUREA

PURPLE PITCHER PLANT sarr. (Synthesis Adonis 541) GROUP: CARNIVOROUS PLANTS

HOMEOPATHY 8 ESSENTIALS Roberto Petrucci - Viktória Németh

SARRACENIA PURPUREA

- Victim and executioner
- Trap, constriction, claustrophobia and suffocation
- Disposition to injure himself up to suicidal thoughts
- Alternation of symptoms (activity and indifference, delusion being a criminal and sensation he suffered wrong, heat and chill)
- Music: weeping from music, delusion hearing music and ear noises resembling music, dreams about music and funeral music
- Headache with visual aura (flickering) and neurological aura (numbness and formication in face, tongue and limbs)
- Ear noises (buzzing, swashing, whistling) synchronous with pulse
- Skin complaints (psoriasis, urticaria, herpetic eruptions) with intolerable itching; indicated in the past in the treatment and prophylaxis of smallpox

NEPENTHES DISTILLATORIA

BADURA nep. (Synthesis Adonis 126) GROUP: CARNIVOROUS PLANTS

HOMEOPATHY 8 ESSENTIALS Roberto Petrucci - Viktória Németh

NEPENTHES DISTILLATORIA

- Victim and executioner
- Trap, constriction, claustrophobia and suffocation
- Overactivity, restlessness, hastiness and impatience
- Optimism, everything seems easier
- Extreme tiredness, apathy, general fatigue, prostration and narcolepsy (second phase)
- Gastrointestinal tract complaints with nutrition and assimilation complaints
- Female disorders (amenorrhea, metrorrhagia, endometriosis, frigidity)
- Syphilitic miasm

WOMAN

37 years old

BORDERLINE PERSONALITY DISORDER (BPD) ASTHMA - GASTROINTESTINAL TRACT COMPLAINTS first consultation March 2018

- During a consultation I receive a request from one of my patients asking me for an online appointment for a friend of his wife.
- This patient's wife was born in Estonia and the appointmen is for a woman who lives in Tallinn
- The patient explains to me that she is a rather peculiar woman....
- I ask how peculiar...
- You'll see, you'll see Doctor... she has a strange character, I'm sure you will have a good time (laughs amused)

- I think she also has some problems in her brain...
- Then I'll tell you something I shouldn't tell you, but I don't think my wife's friend will tell you...
- What?
- She says she is working as PR, but I am sure she has another job....

- The patient chuckles and I wait for him to continue
- Since the patient looks at me with strange eyes, I tell him if he wants to tell me more...

• Yes, public relations, let's say some kind of special relations, not so public...

- I mean, I'm sure she's a prostitute; I don't know if it's full-time or part-time...
- but a friend of mine had, let's say, a close encounter of the third kind...

PUBBLIC RELATIONS

• What do you mean?

- Come on Doc! You got it right and my friend told me she's an extraterrestrial!!!
- OK, that's enough... I don't want to know any more, at least for the moment...

PUBBLIC RELATIONS

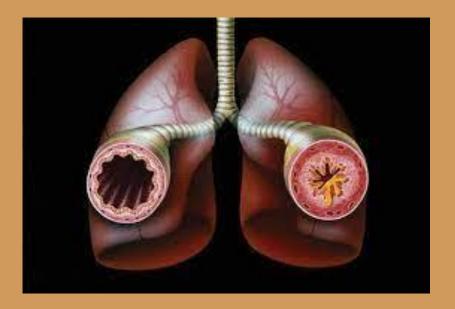

- I see the patient online after a couple of months
- I started as always with the physical symptoms that were reported in her anamnesis

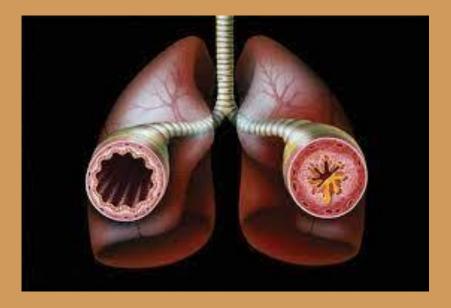

CONSULTATION

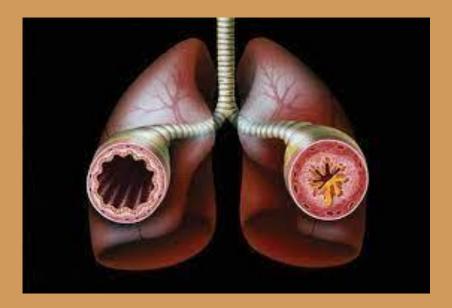

- My main problem is asthma. I have suffered from it since I was five years old, and it has always worsened
- It's not an allergy problem, I'm not allergic
- Every time I get sick, I get asthma; if I get a small cold nothing happens, but if it's a bit more serious, the asthma comes

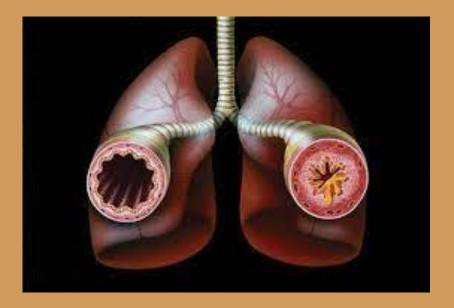

I ask for an explanation of the symptoms and I understand that it gets worse when lying down and she has difficulty breathing in; nothing else, even movement seems indifferent in the sense that she does not have great changes when standing or walking; of course, she cannot run or make other efforts...

- She then goes on to say that along with asthma she always gets a cough
- She tells me: the cough is always dry and when it starts it's a hell... it doesn't stop and it's like a hoover sucking all the energy out of my lungs...
- Especially at night it takes my breath away... I often have to take cortisone otherwise I can't breathe

• I ask where the cough comes from

 It seems to me that it comes from below in the sense that I was telling you before; it is as if my lungs are being sucked out but I cough because here, in the centre of the chest, it is all dry

- Actually, I'm dry all over, my throat is dry, my nose is dry, my eyes are dry and even my lips are always dry; luckily I don't have vaginal dryness but I'm afraid that in the menopause it will be terrible and it's not good...
- My doctor had me tested because he was convinced I had Sjögren's Syndrome, but all the tests were negative

DRYNESS

- Earlier you told me that you started suffering from asthma at the age of 5; what happened at 5?
- When I was 5, I had a terrible whooping cough; my mother says it lasted 4 months and that I often risked suffocating...
- I mean, my lungs seem to have some problems....

WHOOPING COUGH

- Do you suffer from any other diseases?
- For about 5 years I have been suffering from intestinal problems; my doctor says I have irritable bowel syndrome

IRRITABLE BOWEL SYNDROME

- What symptoms do you have?
- I have no symptoms, the only thing is that every night or almost every night I get up twice with diarrhea

IRRITABLE BOWEL SYNDROME

- For five years you have had diarrhea every night?
- It started slowly; first I had attacks 1-2 times a month and slowly they became more frequent; for about 3 months now every night or almost every night I have a fixed appointment, at 1 and 2 o'clock...
- In the last 5 years I have lost 15 kg.; now I weigh 50 kg., before 65
- I ask her height and she says she is 183 cm tall

IRRITABLE BOWEL SYNDROME

And I'm not even hungry because I often feel nauseous, I should always drink coke to avoid nausea; if I drink water, I don't eat anymore...

NAUSEA

• Do you have other physical symptoms?

 Yes, I have other physical symptoms but I am convinced they are related to a medicine I take even though my Doctor says it is impossible

• I ask: what medicine do you take and what symptoms have you noticed?

OTHER SYMPTOMS

Assumo una medicina che si chiama KETIPINOR, credo che il principio attivo sia quetiapina; prendo 400 mg. al giorno, da 4 mesi

I take a medicine called KETIPINOR, I think the active ingredient is quetiapine; I have been taking 400 mg. a day for 4 months

- And why did they give you this medicine?
- I started having the first complaints about 2 years ago; I became more irritable, I got angry at every little thing
- Then my partner forced me to go to the doctor because he said I had become paranoid and saw evil in everyone

He says it was coming from me but it wasn't

you know how many bad people there are in the world...

and I suffered real bullying in my workplace

• What do you do?

 I do public relations and organize fashion-related events, but a woman who works with me, or perhaps I should say my boss, started to treat me badly, she is constantly changing my tasks

- I was organizing an important event in Russia and after I had done the biggest job she gave the organization to another person
- She promised me more money and more responsibility, but she deceived me and in addition she set me against other people, in short, I felt persecuted but, I was!

I felt trapped, I didn't know how to get out of this situation; I don't want to sound like a victim, my partner says I suffer from victimism, but it had become a fixed thought, an obsession, I didn't think about anything else

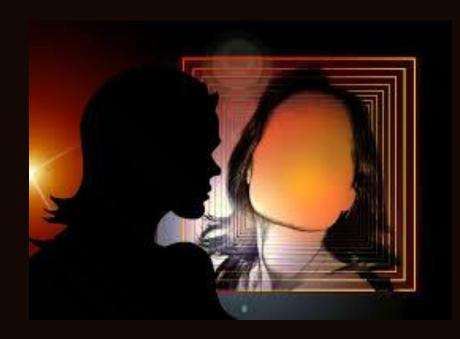

- My doctor sent me to a psychiatrist who said he could help me with this drug
- He told me it could help in cases of bullying but that anyway my problem was a psychological disorder he called BPD , Borderline personality disorder

• And how are you now?

 I'm better but it's not because of the medicine; in the meantime, some things have changed at work and now it's better; we're working differently...

- And what ailments have you had since KETIPINOR?
- First of all, I have difficulty swallowing; sometimes I get food stuck in my throat and if I don't have something to drink, I choke and then I don't see so well anymore, I have more difficulty reading, I have blurred vision

In addition, since the first month my periods have changed; the first month was short and then my period disappeared

MIND

- Tell me something about your character
- Well, I am a woman...
- Tell me what women are like...

CHARACTER

- Well, I don't want to give you a bad impression, but my friend told me that you are a person who doesn't judge
- I was struck by a sentence you said to my friend's husband when you first saw each other, and you told him that you hear so many stories and that everyone has his own life and his own way of living life and you are only interested in knowing these things in order to find a solution to the problem

CHARACTER

• Well, that's actually what I think...

• Then I'll be very open with you

CHARACTER

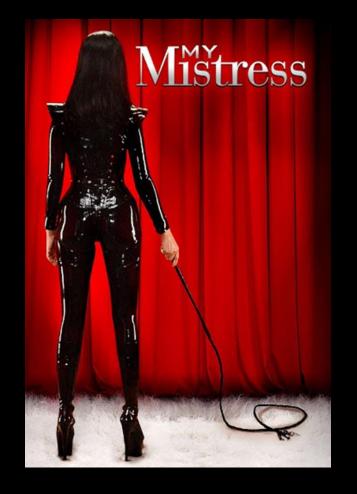

- I was telling you that I am a woman... and as a woman I like men and maybe more than men I like their money...
- I just try to find ways to earn some money; a woman has to learn how to attract men, sometimes with some strategies and some lies...
- For the past five years I have had a rather peculiar activity... I have discovered that many men like to be submissive, and I like to be in charge... let's say I have become a mistress

- Explain to me...
- You don't know what a mistress is?
- Well, let's say I do not have direct experience...

MISTRESS

- Let's say a mistress has a few instruments of torture in her bag....
- But apart from the money, what do you like about it?

- Money is a lot, there are men who pay unthinkable sums to be subjected to the worst of the worst...
- I feel good, I feel strong, I feel like a kind of queen; is it bad to say that I like to see someone suffer?

- Sometimes there is also sex, but this part is what I like the least; I have never been crazy about sex and my partner always scolds me about this...
- He is always ready to have sex and likes to be violent... let's say that, in some way, I suffer with him what I do with other men

- Don't get me wrong, it's not really the same thing but my partner likes hard sex...
- He has even proposed to me to participate in my encounters with other men, but I have always refused

- Does this mean that your partner knows about your 'parallel life'?
- Yes, because he met me through one of my 'clients' and therefore already knew everything...

PARALLEL LIFE

- And what does your partner say about all this?
- Well, he took it as a job... after all, he doesn't do much with his life and if we can afford a life of luxury, it's thanks to me

PARALLEL LIFE

- Do you have any fears?
- My biggest fear is claustrophobia, I can't stand anything where I can get trapped, lifts, cellars, rooms without windows... imagine that we went to see a house and the second bathroom didn't have a window and although I really liked the house I said no
- My partner told me I could only use the other bathroom, but I said no, in a house that has a room without a window I don't live there... I feel suffocated!

10MK

5 drops 2 times a day

Last night I had a very strong asthma attack; I took cortisone after a few minutes, but I didn't improve and after 10 minutes I took another one then I fell asleep

The night was torturous, I didn't wake up, but I had a lot of dreams; I never dream, I never remember dreams but this morning when I woke up I realized that I had been dreaming all night long or so it seems to me

- I dreamt that I was in the jungle with a lot of wild animals, and I was running away without finding my way out but then I turned into a dragon and swallowed all the animals that were attacking me
- It was terrible...

MY ANSWER

- Fantastic! You'll see that you'll get better quickly!
- Go on with 5 drops twice a day

- I hardly have any diarrhea anymore, it's only happened twice in 2 weeks
- Asthma's a bit better; last week I caught a cold, started sneezing and coughing but the coughing wasn't devastating and the difficulty in breathing was less severe

FOLLOW UP AFTER 2 WEEKS

10MK

7 drops 2 times a day

FOLLOW UP AFTER 2 WEEKS

- The diarrhea is no longer there
- I got sick again but again this time the cough and asthma were more contained
- What has changed is my mood; I don't know, I feel happier, I see others differently

FOLLOW UP AFTER 4 WEEKS

- When I started taking KETIPINOR I saw everyone as an enemy and with the treatment this did not change so much; I felt less persecuted, but I did not see others in a positive way
- Now I could say that I have regained my trust in people

FOLLOW UP AFTER 4 WEEKS

50MK

5 drops 2 times in a row before sleep (in case of asthmatic attack 5 drops every minute for 5 times)

FOLLOW UP AFTER 4 WEEKS

 When I started the new treatment (50MK) I had the same effect as at the beginning of the other bottle with a really strong asthmatic attack but I did what you told me and took the drops for 5 times every minute

 I resisted a little but after 10 minutes the cough had gone completely and then I slept well

 I had many more dreams that night but they were very different; I was happy, I was always in the jungle, but I was walking quietly and I remember stopping every five minutes to drink from rivers with very clean and clear water

• I no longer had asthma

• I had a couple of episodes of diarrhea but not really important

- My menses are back and the side effects of KETIPINOR have also improved; I do not struggle anymore to swallow, and my vision is better too
- I feel much better, I am serene

50MK

5 drops 1 time before sleep

She sent me an email and wrote:

- Dear Doctor, sorry for not writing to you in these months but I needed to make some important decisions.
- After our consultation I went back to the psychiatrist and told him that I wanted to stop the medicine he gave me but, according to him, I should continue

- I wanted to write to you but I was afraid you would tell me the same thing, so I did it my way
- I slowly reduced KETIPINOR and haven't taken it for a month

- I thought the remedy could help me, so I decided to take 15 drops twice a day
- Don't be angry with me, I am fine and thank you
- If you want please fix an appointment for me, so you can decide what to do

- The patient continued taking 15 drops 1 time a day
- She had no problems either physically or psychologically
- 50MK 15 drops for 1 time before sleep
- KEEP AT HOME 1M 10M 50M 100M

CONSULTATION AFTER 7 MONTHS (OCTOBER 2018)

- He calls me for an acute situation
- Since the day before he has had a fever (38.5), a persistent cough but the difficulty in breathing is minimal

ACUTE NOVEMBER 2018

50MK

15 drops 3 times in a row every 1' then 15 drops every hour

ACUTE NOVEMBER 2018

She called again in the evening, but the situation has not improved; the fever has risen to 38.8 and the cough is still persistent

 100MK 5 drops 3 times 1' apart then 5 drops every 30' until sleep

The next morning, she called back saying that she slept without waking up; the cough is much improved, and she is relieved

 100MK 5 drops every 2 hours then gradually reduce to 5 drops 1 time a day

- She took the remedy 1 time a day until May 2021
- In May 2021 she contracted Covid with worrying respiratory symptoms; she felt very tired and depressed

2019 – 2022

- I prescribed 1MK 1 drop every hour, reducing the frequency of administration over the following days and after 5 days the symptoms disappeared completely
- She no longer wrote or called me or answered my emails until September 2022

- Dear Doctor, I apologize again for disappearing; perhaps in times of crisis I need to make up my own mind
- As you can imagine during the period of the pandemic, I was no longer able to have meetings with other men and then I never started again!
- In June 2022 I met a man and I fell in love, perhaps for the first time in my life

MAIL FOLLOW UP SEPTEMBER 2022

- I left my partner and finally feel I can have a normal life...
- I feel strong, I feel I no longer need support and if you agree I would try to stop taking her remedy. For the past few months, I have been feeling good and have often forgotten about it and had no problems
- I promise to write to you at the first cough!

MAIL FOLLOW UP SEPTEMBER 2022

- Dear Doctor, I am just writing to wish you a Merry Christmas and to tell you that the cough is gone
- I am getting married next year
- Thank you!

MAIL 24.12.2022

SYMPTOMS FROM REPERTORY

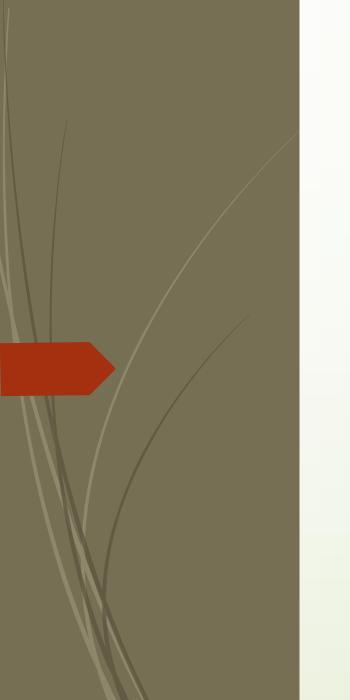

UNITING REPERTORY, MATERIA MEDICA AND PATIENT INFORMATION IN A SINGLE INTUITIVE INTERFACE RESPIRATION - ASTHMATIC
 RESPIRATION - DIFFICULT - lying - agg.
 RESPIRATION - DIFFICULT - inspiration

COUGH - DRY
COUGH - EXHAUSTING
COUGH - SPASMODIC
COUGH - SPASMODIC - night
COUGH - TORMENTING
COUGH - DRYNESS, FROM - Trachea; in

GENERALS - DRYNESS OF USUALLY MOIST INTERNAL PARTS

□ FACE - DRYNESS - Lips

EYE - DRYNESS

NOSE - DRYNESS - Inside

THROAT - DRYNESS

RESPIRATION - DIFFICULT - whooping cough

COUGH - WHOOPING

RECTUM - DIARRHEA - night - midnight - after

GENERALS - EMACIATION

□ STOMACH - NAUSEA - drinking - after - agg.

MIND - ANGER - trifles; at MIND - ANGER - easily

MIND - DELUSIONS - persecuted - he is persecuted
 MIND - DELUSIONS - enemy - surrounded by enemies
 MIND - DELUSIONS - deceived; being
 MIND - SUSPICIOUS

■ MIND - FEAR - narrow place, in

THROAT - SWALLOWING - difficult - solids

 FEMALE GENITALIA/SEX - MENSES - suppressed menses
 FEMALE GENITALIA/SEX - MENSES - absent
 FEMALE GENITALIA/SEX - MENSES - scanty

□ VISION - BLURRED - letters
